

SDAŃSK UNIVERSITY 的 OF TECHNOLOGY

Subject card

Subject name and code	Mechatronic design, PG_00033865							
Field of study	Nanotechnology							
Date of commencement of studies	October 2020		Academic year of realisation of subject			2022/2023		
Education level	first-cycle studies		Subject group			Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery			at the university		
Year of study	3		Language of instruction			Polish		
Semester of study	5		ECTS credits			2.0		
Learning profile	general academic profile		Assessment form			assessment		
Conducting unit	Zakład Mechatroniki -> Institute of Mechanics and Machine Design -> Faculty of Mechanical Engineering and Ship Technology							
Name and surname of lecturer (lecturers)	Subject supervisor		prof. dr hab. inż. Krzysztof Kaliński					
	Teachers		prof. dr hab. inż. Krzysztof Kaliński dr inż. Natalia Stawicka-Morawska					
Lesson types and methods	Lesson type	Lecture	Tutorial	Laboratory	Projec	t	Seminar	SUM
of instruction	Number of study hours	15.0	0.0	0.0	15.0		0.0	30
	E-learning hours inclu	ided: 0.0						
Learning activity and number of study hours	Learning activity Participation ir classes include plan		I didactic Participation in ed in study consultation hours		Self-study SUM			
	Number of study 30 hours			1.0		19.0		50
Subject objectives	Acquiring basic knowledge and skills in scope of mechatronic design.							
Learning outcomes	Course outcome		Subject outcome			Method of verification		
	K6_U04		The student identifies the phenomena related to the functioning mechatronic systems			[SU2] Assessment of ability to analyse information [SU4] Assessment of ability to use methods and tools		
	K6_W09		The student recognizes the methods designing the structure of circuits mechatronic and observed signals. Student defines team tasks mechatronic design			[SW1] Assessment of factual knowledge		
	K6_U07		The student shows composure design methods mechatronic systems stationary and economics of their use.			[SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools		
Subject contents	LECTURES. Basic definitions and terms of mechatronics. Modelling in mechatronics. Models of mechatronic systems components. Analogies between physical environments. Dynamic equations in generalised coordinates. Transfer function. Static characteristics. The problems of mechatronic design. Means of the mechatronic projects performance. Modelling of multi-body systems. Eigenvibrations of the finite-degree-of-freedom systems.							
	LABORATORY. Identification of mechatronic component in the projects. Propositions of mechatronic solutions and concept of their performance.							

Prerequisites and co-requisites	Mechanics of solids and fluids. Introduction to electronics and electrical engineering. Automatics						
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade				
	Passing colloquium	50.0%	50.0%				
	Project	100.0%	50.0%

Gdańsk: The Publication of GUT 2012. Grzegożek W., Adamiec-Wójcik I., Wojciech S.: Computer modelling of the car vehicles dynamics. Kraków: The T. Kościuszko Cracow University of Technology 2003. 					
	eResources addresses	Adresy na platformie eNauczanie: Projektowanie mechatroniczne, W, Nanotechnologia, sem. 5, zimowy 2022/23 (NAN1C029) - Moodle ID: 26992 https://enauczanie.pg.edu.pl/moodle/course/view.php?id=26992					
Example issues/ example questions/ tasks being completed	 Development of functional systems design. The tasks of mechatronic design. The dissipating energy components of mechatronic systems. 2-wheeled mobile robot as example of original mechatronic device. Example of mechatronic design on a basis about the only systems knowledge. Modelling of multi-body systems. Dynamic equations. 						
Work placement	Not applicable
