

## Subject card

Subject name and code	Remote Sensing, PG_00044813								
Field of study	Geodesy and Cartography								
Date of commencement of studies	October 2020		Academic year of realisation of subject			2021/2022			
Education level	first-cycle studies		Subject group			Obligatory subject group in the field of study Subject group related to scientific research in the field of study			
Mode of study	Full-time studies		Mode of delivery			at the university			
Year of study	2		Language of instruction			Polish			
Semester of study	4		ECTS credits			3.0			
Learning profile	general academic profile		Assessment form			exam			
Conducting unit	Department of Geode	esy -> Faculty o	of Civil and Env	ironmental En	gineerin	g			
Name and surname of lecturer (lecturers)	Subject supervisor dr inż. Anna Sobieraj-Żłobińska Teachers								
Lesson types and methods	Lesson type	Lecture	Tutorial Laboratory Project		t	Seminar	SUM		
of instruction	Number of study hours	30.0	0.0	0.0	15.0		0.0	45	
	E-learning hours included: 0.0								
	Adresy na platformie eNauczanie:								
Learning activity and number of study hours	Learning activity	activity Participation in classes include plan		Participation in consultation hours		Self-study		SUM	
	Number of study hours	study 45		6.0		24.0		75	
Subject objectives	Getting to know the methods of remote data acquisition, digital image processing techniques and creating selected remote sensing studies.								
Learning outcomes	Course out	come	Subj	ect outcome			Method of ve	rification	
	in the field of topographic surveys along with the elaborating of results, geodetic investment		The student has basic skills in digital processing of remote sensing data. He can use the methods of image classification, calculation of indices, color compositions to create thematic maps.			[SU1] Assessment of task fulfilment [SU4] Assessment of ability to use methods and tools			
	[K6_W07] has a well-established knowledge and understands concepts in the field of engineering geodesy including the use of calculations and measurements methods carried out with the use of geodetic instruments and photogrammetric and remote sensing technologies related to geodetic support for investment, surveying and inventory measurements and photogrammetry with remote sensing  [K6_U08] can use modern measurement technologies to solve common tasks in 3D modeling		The student has knowledge of the physical basics of remote sensing. He knows selected methods of acquiring data from the airborne and satellite platforms. He also has basic knowledge of digital processing and analysis of aerial and satellite images. He has knowledge of the methods of creating basic remote sensing products.  The student has skills in the use of remote sensing methods and technologies for information extraction and data acquisition for the construction of thematic databases.			[SU2] Assessment of ability to analyse information [SU4] Assessment of ability to use methods and tools			

Data wydruku: 03.05.2024 02:10 Strona 1 z 2

Subject contents	Fundamentals of: electromagnetic radiation, multispectral image, spectral characteristics, vegetation index, spectral and radiometric range and resolution, spatial resolution. Types of remote sensing data. Data sources and remote sensing data acquisition methods. Passive and active methods. Sentinel and Landsat systems. Simple operations on spectral channels. Spectral compositions - selection of channels for color compositions, development of a normalized vegetation index, humidity index, etc., interpretation of the results. Development of thematic maps. Classification of multispectral images. Process of unsupervised / supervised classification.						
Prerequisites and co-requisites	Basic knowledge of mathematics and physics.						
Assessment methods	Subject passing criteria	Passing threshold	Percentage of the final grade				
and criteria	project	60.0%	35.0%				
	exam	60.0%	40.0%				
	report	60.0%	25.0%				
Recommended reading	Basic literature	Adamczyk J., Będkowski K.: Metody cyfrowe w teledetekcji. Wydawnictwo SGGW, Warszawa 2005  Kurczyński Z.: Lotnicze i satelitarne obrazowanie Ziemi; Oficyna Wydawnicza Politechniki Warszawskiej, Warszawa 2006  Sanecki J. (red): Teledetekcja: Pozyskiwanie danych. WNT, 2006					
	Supplementary literature  eResources addresses	Bernasik J.: Wykłady z fotogrametrii i teledetekcji, Kraków 2008,  Mulasz S.: Podstawy z teledetekcji. Wprowadzenie do GIS.  Wydawnictwo PK, 2004					
Example issues/ example questions/ tasks being completed	Interpretation of the NDVI valueDevelopment of a thematic map for a selected area using the results of classification						
Work placement	Not applicable
