

Subject card

Subject name and code	Satellite geodesy and basics astronomy, PG_00044834						
Field of study	Geodesy and Cartography						
Date of commencement of studies	October 2020		Academic year of realisation of subject		2022/2023		
Education level	first-cycle studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	3		Language of instruction		Polish		
Semester of study	5		ECTS credits		6.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Department of Geodesy -> Faculty of Civil and Environmental Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor		prof. dr hab. inż. Mariusz Figurski				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	45.0	15.0	15.0	0.0	0.0	75
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	75		10.0		65.0	150
Subject objectives	The aim of the course is to teach students issues related to the movement of the Earth in outer space, the transformation of coordinates in celestial and terrestrial reference systems. methods of determining coordinates and azimuths using the motion of celestial bodies and satellites, understanding GPS / GNSS signals, code and phase measurements, practical application of GPS / GNSS and the consequences of their modernization,						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K6_W03] knows and understands the principles of mathematical statistics described in the examples of the adjustment computations		Knowledge of mathematical statistics used in the equation.		[SW3] Assessment of knowledge contained in written work and projects		
	[K6_U04] can use contemporary geodetic instruments, including automation of measurements, data transmission and processing in a computer-instrument system with the use of computer networks		The student is able to assess the possibility of using the GNSS receiver to determine the coordinates of a given point in the field. He can make basic astronomical measurements with a total station. Can choose the measurement method depending on the required accuracy of the coordinates. Is able to use modern recording devices and programs to develop satellite data.		[SU1] Assessment of task fulfilment [SU5] Assessment of ability to present the results of task [SU2] Assessment of ability to analyse information		
	[K6_U06] can solve geodetic tasks and select measurement methods for typical engineering tasks including the curvature of the Earth and the impact of gravity		The student is able to determine the coordinates of points using standard static and RTK measurements. Is able to carry out a measurement with auto-registration of points		[SU4] Assessment of ability to use methods and tools [SU3] Assessment of ability to use knowledge gained from the subject [SU2] Assessment of ability to analyse information		

Subject contents	<div>1. Introduction. What will we do in the framework of satellite geodesy and astronomy? What is the relationship between astronomy and satellite geodesy?</div> <div>2. Astronomy in geodesy. Day movement of the celestial sphere, annual movement of the sun in the celestial sphere and astronomical seasons of the year, characteristic points and large circles on the celestial sphere, basic astronomical coordinate systems and geographical coordinates, the appearance of the celestial sphere at different latitudes and climatic zones on the Earth's surface.</div> <div>3. Time. Local time, universal time, time measurements.</div> <div>4. Spherical triangle. Basic relationships of spherical trigonometry in spherical astronomy.</div> <div>5. Determination of geographical coordinates and azimuth of the place of observation. Culminations, latitude, longitude, and azimuth. Azimuth reductions.</div> <div>6. The shape and size of the Earth, rotation of the Earth, flattening of the Earth, Coriolis force, atmosphere, magnetic field, orbital motion of the Earth in relation to the Sun (heliocentric parallax and 1 hour aberration), phenomena of Earth's rotation, phenomena related to the tidal interaction of the Moon and the Sun</div> <div>7. Elements of orbital movements. Kepler's laws, analysis of the motion of celestial bodies along conic sections. Satellite perturbations.</div> <div>8. Reference systems and systems in satellite geodesy, national systems.</div> <div>9. Satellite leveling. Geometric heights and orthometric heights. Solving the problem of satellite leveling by determining the height of the geoid in relation to the ellipsoid. Simplified methods of determining the geoid in small areas. An approach to the height system in Poland.</div> <div>10. Principles of satellite positioning before and in the era of GNSS. Technological precursors of GNSS, terrestrial positioning systems, extraterrestrial systems, satellite positioning. Construction of GNSS systems based on GPS.</div> <div>11. Global positioning satellite systems (GNSS). Operational systems GPS, GLONASS, GALILEO, COMPAS, GNSS signals and errors, satellite messages and ephemeris. Phase and code observations, basic observational equations.</div> <div>12. Measurement errors and ways to reduce them. Discussion of the budget of errors and their sources. Receiver and satellite clock errors. Ionospheric and tropospheric effects. Classification of positioning methods.</div> <div>13. Types of receivers and measurement methods. Common features of GPS receivers. Construction of the receiver. Selected methods of GPS measurements. Accuracy of measurement. Types of GNSS receivers.</div> <div>14. GNSS and geodetic coordinate and height systems. Realization of the satellite reference system in Poland. EURE-POL, POLREF, EUVN, ASG-EUPOS networks. Permanent systems of various scales.</div> <div>15. Static measurements, DGPS, RTK.</div> <div>16. GNSS observations and their processing methods. Ways of establishing geodetic networks with the use of GNSS technique.</div> <div>17. Geodetic and non-geodetic GNSS locating. GNSS meteorology.</div> <div>18. Modernization of GPS and GNSS, the future of satellite navigation systems.</div>											
Prerequisites and co-requisites	Knowledge from subject Geodesy I (GSPKC.5.1.), physics, physics, mathematics											
Assessment methods and criteria	<table><tr><th>Subject passing criteria</th><th>Passing threshold</th><th>Percentage of the final grade</th></tr><tr><td>Practical Exercises</td><td>55.0%</td><td>60.0%</td></tr><tr><td>Final test</td><td>55.0%</td><td>40.0%</td></tr></table>	Subject passing criteria	Passing threshold	Percentage of the final grade	Practical Exercises	55.0%	60.0%	Final test	55.0%	40.0%		
Subject passing criteria	Passing threshold	Percentage of the final grade										
Practical Exercises	55.0%	60.0%										
Final test	55.0%	40.0%
