

Subject card

Subject name and code	GEOINFORMATICS OF URBANISED AREAS, PG_00044849								
Field of study	Geodesy and Cartography								
Date of commencement of studies	October 2020		Academic year of realisation of subject			2022/2023			
Education level	first-cycle studies		Subject group			Optional subject group			
Mode of study	Full-time studies		Mode of delivery			at the university			
Year of study	3		Language of instruction			Polish			
Semester of study	5		ECTS credits			6.0			
Learning profile	general academic profile		Assessment form			assessment			
Conducting unit	Department of Geodesy -> Faculty of Civil and Environmental Engineering								
Name and surname	Subject supervisor prof. dr hab. inż. Andrzej Stateczny								
of lecturer (lecturers)	Teachers mgr inż. Bartosz Szost prof. dr hab. inż. Andrz				Stateczny				
Lesson types and methods	Lesson type	Lecture	Tutorial	Laboratory	Projec	t	Seminar	SUM	
of instruction	Number of study hours	30.0	15.0	15.0	0.0		0.0	60	
	E-learning hours inclu			ı		1			
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study		SUM	
	Number of study hours	60	9.0			81.0		150	
Subject objectives	The student learns the basics of Spatial Information Systems - GIS. Then he or she broadens the knowledge about data acquisition, collection, processing and modelling. He or she gets acquainted with 3D visualization in GIS, analysis and processing of ALS data. In the final stage of the course the student performs the analysis of visibility and shading in ArcGIS environment.								
Learning outcomes	Course outcome Subject outcome					Method of verification			
	[K6_U05] is able to develop a simple algorithm and prepare a simple program in object-oriented language taking into account the geodetic specifics and the specificity of spatial information systems		data vector and raster			[SU5] Assessment of ability to present the results of task [SU4] Assessment of ability to use methods and tools [SU3] Assessment of ability to use knowledge gained from the subject

Example issues/	Draw Thiessen's training ground on 20 sample points.			
example questions/ tasks being completed	2. Determine the values at the point (x,y,?) using the inverse distance method with a smoothing parameter of 1 for the following measurement points: (x1,y1,z1), (x2,y2,z2), (x3,y3,z3), (x4,y4,z4), (x5,y5,z5), (x6,y6,z6) and the method parameter equal to 2.			
	3. Determine the values at the point (x,y,?) by triangulation with linear interpolation. Coordinates of vertices of the triangle: (x1,y1,z1), (x2,y2,z2), (x3,y3,z3)			
	4. Natural neighbor's method.			
	5. Geostatic method.			
	6 DTM - definition, tasks, applications.			
	7. DTM grid type selection and division of modelling methods.			
	8. TIN creation methods.			
	9. Interpolation of surfaces using TIN.			
	10. Medium weight methods.			
	 11. Minimal curvature method. 12. Methods based on radial functions. 13. Triangle method in measurement data reduction. 14. Douglas-Pucker method. 15. Triangle reduction methods. 15. 			
	16. Methods of reducing the grid of squares. 16.			
	17. Artificial neural networks in the construction of DTM - design and preparation of a learning set.			
	18. GRNN network in the construction of DTM.			
	19. 3D GIS - levels of detail and stages of creating 3D maps.			
	20 The process of creating an orthophotomap.			
	21. 3D photorealistic model.			
	22. Sampling of field measurement data.			
	23. Aerial photograph-photomap-orthotomap.			
	24. Satellite photos and aerial photos.			
	25. LIDAR data acquisition.			
	26. Use of analog materials in the process of geodata acquisition.			
	27. Surface analysis.			
	28. Visibility analysis.			
	29. Analysis of surface changes. 30. Geoinformatics, geoinformation, SIP, SIT			
Work placement	Not applicable
