

## Subject card

Subject name and code	Physical Chemistry, PG_00048783						
Field of study	Green Technologies						
Date of commencement of studies	October 2020	Academic year of realisation of subject			2021/2022		
Education level	first-cycle studies	Subject group			Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	2	Language of instruction			Polish		
Semester of study	3	ECTS credits			7.0		
Learning profile	general academic profile	Assessment form			exam		
Conducting unit	Department of Physical Chemistry -> Faculty of Chemistry						
Name and surname of lecturer (lecturers)	Subject supervisor	dr hab. inż. Dorota Warmińska					
	Teachers	dr inż. Anna Kuffel dr hab. inż. Dorota Warmińska					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	15.0	45.0	0.0	0.0	90
	E-learning hours included: 0.0 Address on the e-learning platform: <a href="https://enauczanie.pg.edu.pl/moodle/course/view.php?id=19262">https://enauczanie.pg.edu.pl/moodle/course/view.php?id=19262</a> Adresy na platformie eNauczanie:						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM		
	Number of study hours	90	10.0	75.0	175		
Subject objectives	The aim of the subject is to familiarize the student with fundamental physico-chemical laws in chemical thermodynamics, phase equilibria and chemical equilibria together with ability of solving relevant text problems involving calculations, as well as teaching him/her effective and safe carrying out simple experiments/ measurements of physico-chemical quantities and proper presentation and interpretation of their results.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	[K6_W02] has a basic knowledge of chemistry including general chemistry, inorganic, organic, physical, analytical, including the knowledge necessary to describe and understand the phenomena and chemical processes occurring in the environment; measurement and the determination of the parameters of these processes.	Student knows fundamental concepts in physical chemistry, is aware of their mutual relations and can explain these relations.			[SW1] Assessment of factual knowledge		
	[K6_U03] is able to use information and communication technologies relevant to the common tasks of engineering, is able to use known methods and mathematical-physical models to describe and explain phenomena and chemical processes	Student understands mathematical formulae and can express verbally their meaning. Student can also formulate problems verbally with precision permitting to write a suitable equation. Student can analyse simple physicochemical problems and construct suitable algorithms to solve them.			[SU4] Assessment of ability to use methods and tools [SU2] Assessment of ability to analyse information [SU1] Assessment of task fulfilment		

Subject contents	<p>LECTURES: Chemical thermodynamics: Thermochemistry, Hess law and kirchoff's equation. State functions. First principle of thermodynamics. Thermodynamic cycles, Second principle, Gibbs free energy and Helmholtz free energy. Third principle. Criteria of spontaneity and equilibrium of reactions. Open systems, partial molar quantities, chemical potential. Chemical equilibrium. Standard molar Gibbs free energy and reaction quotient. Equilibrium constants. Le Chatelier principle and Van't Hoff isobar. Gibbs-Helmholtz equation. General conditions of phase equilibria. Clausius-Clapeyron equation. Gibbs rule of phases. Gibbs-Duhem equation. Selected equilibria in one-, two-component systems interpretation of phase diagrams. Simple and fractional distillation. Nernst law of partition. Solutions: Colligative properties. TUTORIALS: Calculations of heats of reaction at constant V or P. Calculations of S and G of reaction. Relation of G<sup>0</sup> with equilibrium constants. Calculations of chemical equilibria in gaseous phase, equilibrium compositions and dissociation (reaction) degree. Calculations in phase equilibria in one-component systems. Calculation of composition of phases in gas-liquid systems, compositions of distillates and residuals. Calculations related to colligative properties. LABORATORY: Performing 6 experiments from the list: 1. Calorimetry. 2. Determination of heat of dissolution on the basis of dependence of solubility vs. temperature. 3. Measuring of physicochemical constants of liquids. 4. Measuring vapor pressures of liquids. 5. Determination of a liquid-vapour phase diagram in a two-component system. 6. Cryometry.</p>																	
Prerequisites and co-requisites	completed courses in mathematics, physics, inorganic chemistry and computer science
