

关。GDAŃSK UNIVERSITY 多 OF TECHNOLOGY

Subject card

Subject name and code	Green Organic Technologies, PG_00036303							
Field of study	Green Technologies							
Date of commencement of studies	October 2020		Academic year of realisation of subject			2023/2024		
Education level	first-cycle studies		Subject group			Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery			at the university		
Year of study	4		Language of instruction			Polish		
Semester of study	7		ECTS credits			3.0		
Learning profile	general academic profile		Assessment form			assessment		
Conducting unit	Department of Chemistry and Technology of Functional Materials -> Faculty of Chemistry							
Name and surname	Subject supervisor dr hab. inż. Anna Skwierawska							
of lecturer (lecturers)	Teachers		dr hab. inż. Anna Skwierawska					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Projec	t	Seminar	SUM
	Number of study hours	30.0	0.0	0.0	0.0		0.0	30
	E-learning hours included: 0.0							
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study SUM		SUM
	Number of study hours	30		10.0		35.0		75
Subject objectives	 To acquaint students with the principles of green technology design. To acquaint students with examples of processes that meet the principles of sustainable development. Learning about examples of processes based on renewable raw materials. Comparison of the production processes of the same product from renewable and non-renewable raw materials. 							
Learning outcomes	Course outcome		Subject outcome			Method of verification		
Subject contents	Introduction to green chemistry. The Twelve Principles of Green Chemistry. Innovative aspects of green chemistry. Green organic reactions "on water" and in superheated water. Green "solvent free" organic reactions. Introduction to sustainable development. Examples of green technologies in heavy organic technology. Examples of green technologies in the pharmaceutical industry. Examples of green technologies in the production of polymers. Green detergents and plant protection products. Green polymers and dyes. Green organic catalysts. Other modern technologies based on renewable raw materials. Comparison of the production processes of hydrogen, alkenes and fuels from biomass with similar processes using methane. Organic adsorbents used in water treatment.							
Prerequisites and co-requisites								
	Knowledge of organic chemistry							
	. Knowledge of basic techniques of water, air and soil protection							
	. Basic knowledge of technology and chemical engineering							
	. knowledge of green inorganic technologies.							

Assessment methods	Subject passing criteria	Passing threshold	Percentage of the final grade			
and criteria	First written tests. Open and closed questions. The duration of the test is 60 minutes.	60.0%	50.0%			
	The second written tests. Open and closed questions. The duration of the test is 60 minutes.	60.0%	50.0%

Example issues/ example questions/ tasks being completed	 Based on the calculated environmental parameters, make the right choice of raw materials for the process. Discuss examples of technologies implemented in solvent-free conditions. What are the limitations of these methods? Environmental problems resulting from the use of biomass in the production of hydrogen. Environmental problems in the production of natural dyes and detergents. Is bioethanol dehydration an example of green technology? Is propene production from waste glycerin obtained during biodiesel production really a green technology? 					
Work placement	Not applicable
