

Subject card

Subject name and code	Numerical methods, PG_00052076						
Field of study	Nanotechnology						
Date of commencement of studies	October 2020	Academic year of realisation of subject			2021/2022		
Education level	first-cycle studies	Subject group			Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	2	Language of instruction			Polish		
Semester of study	4	ECTS credits			4.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Instytut Nanotechnologii i Inżynierii Materiałowej -> Faculty of Applied Physics and Mathematics						
Name and surname of lecturer (lecturers)	Subject supervisor	dr hab. inż. Jacek Dziedzic					
	Teachers	dr hab. inż. Jacek Dziedzic					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	30.0	0.0	0.0	45
	E-learning hours included: 0.0 Adresy na platformie eNauczanie: Metody numeryczne - Moodle ID: 22592 https://enauczanie.pg.edu.pl/moodle/course/view?id=22592						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM		
	Number of study hours	45	5.0	50.0	100		
Subject objectives	The aim of this class is to familiarise students with numerical methods for data processing. After a brief introduction devoted to floating-point arithmetics, we cover the most important classes of numerical methods algorithms for numerical integration, methods of solving nonlinear equations, function approximation, Monte-Carlo methods. In the laboratory part, students are introduced to the Mathematica symbolic computation package, which they subsequently employ in practical problems, thus consolidating the acquired theoretical knowledge.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	K6_U01	The student has the ability to extend their knowledge by consulting the content provided by the teacher. He can also find and use other sources (built-in help, user manuals).	[SU1] Assessment of task fulfilment [SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools [SU5] Assessment of ability to present the results of task
	K6_K04	The student is able to work in a group of several people on one specific issue. The student is able to identify and implement steps leading to the goal.	[SK4] Assessment of communication skills, including language correctness [SK5] Assessment of ability to solve problems that arise in practice [SK1] Assessment of group work skills
	K6_U03	The student knows how to program in the Mathematica symbolic computation language and, optionally, in a high-level language of his/her choice that is customarily used in numerical computations (eg C, C ++, Fortran).	[SU1] Assessment of task fulfilment [SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools [SU5] Assessment of ability to present the results of task
K6_W04	The student has an extended and structured knowledge of IT tools used for numerical and symbolic calculations. The student is able to create a simple program in the Mathematica symbolic computation language.	[SW1] Assessment of factual knowledge [SW3] Assessment of knowledge contained in written work and projects	
Subject contents	<p>Floating point representation. IEEE 754 standard.</p> <p>Methods of integrating functions of one variable: quadrature with fixed nodes, Newton-Cotes quadrature, Romberg's method, Gauss quadrature.</p> <p>Methods of solving nonlinear equations of one variable: bisection, regula falsi, secant method, Newton's method.</p> <p>Approximation and interpolation of functions: Lagrange interpolation formula, Newton interpolation formulas, mean square and polynomial approximation, orthogonal polynomials, trigonometric approximation.</p> <p>Monte Carlo method applied to the calculation of the definite integral of functions of one and many variables.</p> <p>The Mathematica package: arithmetics, function notation, built-in functions, variables, assignment, delayed assignment, basic symbolic calculations, partial and total derivatives, indefinite and definite integrals, user-defined functions, boolean logic, graphing functions, solving equations and systems of equations - symbolically and numerically, substitutions and rules, lists and list operations, importing numerical data and fitting, loops and conditions.</p>		
Prerequisites and co-requisites	<p>Basic: Basics of calculus (continuous functions, Riemann integral, minimisation of a function, zeroes of a function, partial and total derivatives).</p> <p>Additional: Fourier series.</p>		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	lab reports	50.0%	50.0%
	written exam in theory	50.0%	50.0%
Recommended reading	Basic literature	<ol style="list-style-type: none"> 1. Szatkowski, Cichosz Metody numeryczne, Wydawnictwo PG, 2008. 2. Fortuna, Macukow, Wałowski Metody numeryczne, Wydawnictwa Naukowo-Techniczne, 1995. 	
	Supplementary literature	<ol style="list-style-type: none"> 1. Press, Teukolsky, Vetterling, Flannery Numerical Recipes The Art of Scientific Computing, Cambridge University Press, 2007. 2. Materials provided by the teacher. 	
	eResources addresses	<p>Metody numeryczne - Moodle ID: 22592 https://enauczenie.pg.edu.pl/moodle/course/view.php?id=22592</p>	

<p>Example issues/ example questions/ tasks being completed</p>	<p>List and discuss the main sources of numerical errors in computation.</p> <p>Discuss the IEEE 754 floating point representation.</p> <p>Compare the methods of integrating functions of one variable: quadrature with fixed nodes and Newton-Cotes quadrature.</p> <p>Discuss the Gauss quadrature method.</p> <p>Compare the methods for numerically solving nonlinear equations of functions of one variable.</p> <p>Discuss Lagrange interpolation.</p> <p>Discuss Newton's interpolation.</p> <p>Discuss the mean square approximation.</p> <p>Discuss the trigonometric approximation. For which classes of functions can it be applied?</p> <p>Discuss the Monte Carlo method applied to the calculation of the definite integral of functions of one and many variables.</p>
<p>Work placement</p>	<p>Not applicable</p>
