

## Subject card

|   |  |  |   |                                     |  |            |     |
|---|--|--|---|-------------------------------------|--|------------|-----|
| Subject name and code                       | Digital Signal Processors, PG_00048091   |  |   |                                     |  |            |     |
| Field of study                              | Electronics and Telecommunications   |  |   |                                     |  |            |     |
| Date of commencement of studies             | October 2020   |  | Academic year of realisation of subject   |                                     | 2022/2023  |            |     |
| Education level                             | first-cycle studies  |  | Subject group   |                                     | Optional subject group<br>Subject group related to scientific research in the field of study |            |     |
| Mode of study                               | Full-time studies  |  | Mode of delivery  |                                     | at the university  |            |     |
| Year of study                               | 3  |  | Language of instruction   |                                     | Polish   |            |     |
| Semester of study                           | 6  |  | ECTS credits  |                                     | 3.0  |            |     |
| Learning profile                            | general academic profile   |  | Assessment form   |                                     | exam   |            |     |
| Conducting unit                             | Department of Metrology and Optoelectronics -> Faculty of Electronics, Telecommunications and Informatics  |  |   |                                     |  |            |     |
| Name and surname of lecturer (lecturers)    | Subject supervisor   |  | prof. dr hab. inż. Janusz Smulko  |                                     |  |            |     |
|   | Teachers   |  | prof. dr hab. inż. Janusz Smulko<br><br>dr inż. Bartłomiej Dec  |                                     |  |            |     |
| Lesson types and methods of instruction     | Lesson type  | Lecture  | Tutorial  | Laboratory                          | Project  | Seminar    | SUM |
|   | Number of study hours  | 30.0   | 0.0   | 15.0                                | 0.0  | 0.0        | 45  |
|   | E-learning hours included: 0.0   |  |   |                                     |  |            |     |
| Learning activity and number of study hours | Learning activity  | Participation in didactic classes included in study plan |   | Participation in consultation hours |  | Self-study | SUM |
|   | Number of study hours  | 45   |   | 3.0                                 |  | 27.0       | 75  |
| Subject objectives                          | Knows how to program digital signal processors and knows the selected digital signals algorithms and their implementation methods.   |  |   |                                     |  |            |     |
| Learning outcomes                           | Course outcome   |  | Subject outcome   |                                     | Method of verification   |            |     |
|   | [K6_W04] Knows and understands, to an advanced extent, the principles, methods and techniques of programming and the principles of computer software development or programming devices or controllers using microprocessors or programmable elements or systems specific to the field of study, and organisation of systems using computers or such devices |  | 136/5000<br>Acquires knowledge in the field construction and programming of systems digital for typical implementations digital algorithms signal processing. |                                     | [SW1] Assessment of factual knowledge  |            |     |
|   | [K6_U04] can apply knowledge of programming methods and techniques as well as select and apply appropriate programming methods and tools in computer software development or programming devices or controllers using microprocessors or programmable elements or systems specific to the field of study   |  | Familiar with the practical implementation of digital algorithms signal processing in selected set run with processor signal.                                 |                                     | [SU1] Assessment of task fulfilment  |            |     |

|                                 |   |   |                               |
|---------------------------------|---|---|-------------------------------|
| Subject contents                | 1. Principles of digital signal processing: methods of signal sampling, development of digital techniques, the recommended literature<br>2. Main elements of digital signal systems (aliasing filters, A/D and D/A converters, digital signal processor)<br>3. Comparison between analog and digital techniques (programming and characteristic recurrence, adaptive algorithms)<br>4. Rules of digital signal processor (DSP) choice<br>5. Characterization of DSP architecture and interacting circuits<br>6. Techniques of DSP programming (file structure)<br>7. Analysis of an example DSP program<br>8. Functions of DSP/BIOS modules<br>9. Parameters and benchmarks of DSP computing efficiency<br>10. Usage of MATLAB for DSP programming (automatic code generation)<br>11. Fixed and floating point numbers in DSP - properties<br>12. Functional blocks of DSP in Analog Devices, type 21xx<br>13. Assembler for Analog Devices DSP, type 21xx<br>14. Interacting circuits for DSP methods of connection<br>15. Architecture of DSP, Analog Devices type SHARC<br>16. Architecture of DSP, Texas Instruments type TMS320C2xxx<br>17. Adaptive filtering in DSP an example program<br>18. Architecture and assembler of DSP, Texas Instruments type TMS320C5xxx<br>19. Introduction to architecture of DSP, Texas Instruments type TMS320C6xxx<br>20. Addressing, data paths and data buffers for DSP, Texas Instruments type TMS320C6xxx<br>21. Assembler word structure for DSP Texas Instruments type TMS320C6xxx<br><br>22. Methods of code optimization for DSP<br><br>23. FFT algorithm; graph and programming<br>24. Welch method of power spectrum estimation<br>25. Mallat algorithm and wavelet transform<br><br>26. Future of digital signal processors<br><br>27. Final exam |   |                               |
| Prerequisites and co-requisites | Introduction to digital signal processing   |   |                               |
| Assessment methods and criteria | Subject passing criteria  | Passing threshold   | Percentage of the final grade |
|                                 | Exam  | 50.0%   | 66.0%                         |
|                                 | Laboratory reports  | 60.0%   | 34.0%                         |

|--|--|
| Example issues/<br>example questions/<br>tasks being completed | 1. Basic concepts of digital signal processing: the concept of digital signal, methods<br>signal sampling, dynamics of digital techniques development, presentation of recommended literature<br>2. Characteristics of the basic elements of the structure of the digital signal processing system (filters<br>anti-aliasing, A / C and C / A converters, signal processor)<br>3. Comparison of analog and digital techniques (programmability and repeatability of characteristics<br>digital systems, the possibility of implementing adaptive algorithms)<br>4. Rules for selecting signal processors (DSP)<br>5. Characteristics of DSP architecture and cooperating systems<br>6. Techniques for writing DSP control programs (file structure)<br>7. Analysis of the sample DSP control program<br>8. Functions of DSP / BIOS modules in DSP programming<br>9. Parameters assessing the speed of data processing by DSP<br>10. The use of MATLAB in the process of preparing the program controlling the work of DSP (automatic<br>program code generation tools)<br>11. Representation of fixed and floating point numbers in DSP - properties<br>12. Detailed architecture of functional blocks of Analog Devices signal processors, family 21xx<br>13. Assembler basics for DSP 21xx family (addressing modes, memory areas, interrupt handling, program<br>structure)<br>14. Systems cooperating with DSP methods of connection<br>15. Architecture of Analog Devices SHARC processors<br>16. PS architecture of the TMS320C2xxx family from Texas Instruments<br>17. Adaptive filtration in the DSP sample program<br>18. Architecture and DSP assembly of the TMS320C5xxx family from Texas Instruments<br>19. Introduction to the DSP Architecture of the TMS320C6xxx family from Texas Instruments<br>20. Addressing methods, paths and data buffers in DSP of the TMS320C6xxx family from Texas Instruments<br>21. Assembler structure of the control word in DSP of the TMS320C6xxx family from Texas Instruments<br>22. Methods for optimizing the DSP control code<br>23. FFT algorithm; flow graph and graph program<br>24. The method of power spectral density estimation according to Welch<br>25. Wavelet transform, Mallat's algorithm<br>26. The future of DSP development<br>27. Exam |
