

Subject card

Subject name and code	Wireless Communication Antennas, PG_00048103							
Field of study	Electronics and Telecommunications							
Date of commencement of studies	October 2020		Academic year of realisation of subject		2023/2024			
Education level	first-cycle studies		Subject group		Optional subject group Subject group related to scientific research in the field of study			
Mode of study	Full-time studies		Mode of delivery		at the university			
Year of study	4		Language of instruction		Polish			
Semester of study	7		ECTS credits		3.0			
Learning profile	general academic profile		Assessme	sessment form		exam		
Conducting unit	Department of Microwave and Antenna Engineering -> Faculty of Electronics, Telecommunications and Informatics							
Name and surname of lecturer (lecturers)	Subject supervisor		prof. dr hab. inż. Włodzimierz Zieniutycz					
	Teachers		prof. dr hab. inż. Włodzimierz Zieniutycz					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Projec	t	Seminar	SUM
	Number of study hours	15.0	0.0	15.0	0.0		0.0	30
	E-learning hours included: 0.0							
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study		SUM
	Number of study hours	30		3.0		42.0		75
Subject objectives	To provide students the parameters and design solutions of antennas from the point of view of application in wireless communication systems.							

Data wydruku: 06.05.2024 09:35 Strona 1 z 3

Learning outcomes	Course outcome	Subject outcome	Method of verification			
	[K6_U03] can design, according to required specifications, and make a simple device, facility, system or carry out a process, specific to the field of study, using suitable methods, techniques, tools and materials, following engineering standards and norms, applying technologies specific to the field of study and experience gained in the professional engineering environment		[SU4] Assessment of ability to use methods and tools [SU1] Assessment of task fulfilment			
	[K6_W34] Knows the characteristics of telecommunications channels, methods of securing information, modulation systems, methods of access to the channel.	Student has mastered the knowledge in the specifics of terrestial and space telecommunication channels which influence the operation of wirelesss systems.	[SW1] Assessment of factual knowledge			
	[K6_U05] can plan and conduct experiments related to the field of study, including computer simulations and measurements; interpret obtained results and draw conclusions	Student measures reflection coefficient, radiation pattern and gain of some typical antennas.	[SU4] Assessment of ability to use methods and tools [SU1] Assessment of task fulfilment			
[K6_W02] Knows and understands, to an advanced extent, selected laws of physics and physical phenomena as wel as methods and theories explaining the complex relationships between them, constituting the basic general knowledge in the field of technic sciences related to the field of study		Student knows and understands propagation phenomena which influence the operation of different wireless systems and explains the operation of some antennas and arrays.	[SW1] Assessment of factual knowledge			
Subject contents						
	 Introduction, wireless communication systems, frequency bands. Propagation environment, types of the waves. Systems requirements and the antenna parameters Antenna arrays for radar system: horns, waveguide slot antennas. Planar antennas for SSR system: strip and microstrio dipoles. Butler matrices. Antennas for positioning systems: helical, SBF, spiral antennas. Planar antennas and arrays for positioning systems. Base station antennas. Multiband antennas for portable phone. Exposure to RF radiation, SAR. Bioelectromagnetics. Antennas for WiFi system. Planar antennas for RFID. Antennas for UWB. Space antennas. Final test 					
Prerequisites and co-requisites	Fundamentals of antenna theory and particularly the parameters of antennas, RF & microwave technology base.					
Assessment methods	Subject passing criteria	Passing threshold	Percentage of the final grade			
and criteria	Practical exercises	50.0%	35.0%			
	Final test		65.0%			
Recommended reading Basic literature		K. Fujimoto, J.R. James: Mobile Antenna Systems Handbook, Artech House, 2001. W. Zieniutycz: Anteny o sterowanej wiązce w technice radarowej WKŁ, 2012. C.A. Balanis: Antenna Theory Analysis and Design, John Wiley and Sons, 1982. A. Kumar: Fixed and Mobile Terminals Antennas, Artech House 1991.				
Supplementary literature		W. Zieniutycz: Anteny, podstawy polowe, WKŁ, 2000.				

Data wydruku: 06.05.2024 09:35 Strona 2 z 3

	eResources addresses	Adresy na platformie eNauczanie: Anteny w komunikacji bezprzewodowej - 23/24 - Moodle ID: 32883 https://enauczanie.pg.edu.pl/moodle/course/view.php?id=32883
Example issues/ example questions/ tasks being completed	Discuss the principle of generations. Discuss the construction of the arms. Present the evolution from the class.	phased arrays and array of a distributed architecture. n of circular polarization in the spiral antenna. Itenna SBF (Short Back Fire). ssical to the PIFA microstrip antenna. RFID technology - requirements for the tag antenna.
Work placement	Not applicable
