

Subject card

Subject name and code	Operating Systems, PG_00047827						
Field of study	Informatics						
Date of commencement of studies	October 2020		Academic year of realisation of subject		2021/2022		
Education level	first-cycle studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Part-time studies		Mode of delivery		at the university		
Year of study	2		Language of instruction		English		
Semester of study	4		ECTS credits		4.0		
Learning profile	general academic profile		Assessment form		exam		
Conducting unit	Department of Software Engineering -> Faculty of Electronics, Telecommunications and Informatics						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Michał Wróbel				
	Teachers		dr inż. Michał Wróbel dr inż. Marcin Pazio				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	15.0	0.0	0.0	30
	E-learning hours included: 0.0						
	Adresy na platformie eNauczanie:						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		4.0		66.0	100
Subject objectives	To familiarize students with the basics of operating systems, including file system, processes, and hardware management. Presentation of the basic commands and shell language structures.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K6_W43] Knows and understands, to an advanced extent, standards and methods of IT systems administration, monitoring of processes occurring in them and immunising them to undesirable phenomena and activities	Student knows operating system architecture. Student defines file system properties. Student describes disks and RAM memory management.	[SW1] Assessment of factual knowledge
	[K6_W03] Knows and understands, to an advanced extent, the construction and operating principles of components and systems related to the field of study, including theories, methods and complex relationships between them and selected specific issues - appropriate for the curriculum	Student classifies operating system processes.	[SW1] Assessment of factual knowledge
	[K6_U42] can apply tools and methods of designing, optimization, monitoring, management, increasing reliability and protection from safety hazards in local and distributed information systems and applications	Student understands access policy to system resources.	[SU5] Assessment of ability to present the results of task
	[K6_U03] can design, according to required specifications, and make a simple device, facility, system or carry out a process, specific to the field of study, using suitable methods, techniques, tools and materials, following engineering standards and norms, applying technologies specific to the field of study and experience gained in the professional engineering environment	Student distinguishes text processing programs. Student tests bash scripts.	[SU1] Assessment of task fulfilment
	[K6_W04] Knows and understands, to an advanced extent, the principles, methods and techniques of programming and the principles of computer software development or programming devices or controllers using microprocessors or programmable elements or systems specific to the field of study, and organisation of systems using computers or such devices	Student creates shell scripts.	[SW3] Assessment of knowledge contained in written work and projects

Subject contents

1. Operating system goals and definitions.
2. Operating system concept and its structural model
3. File concept system and its elements
4. I-node structure and its elements
5. File system, directory tree structure
6. Mounting and file system dynamic modification rules
7. Hard and symbolic links creation
8. Process model and implementation, fork function
9. Standard input/output, redirection rules, pipe function
10. Process and thread management
11. Context change, multiprocessing
12. Task scheduler, queues, preemptive multitasking
13. Processor time management
14. Starvation and deadlock problems
15. Access to resources problems, dining philosophers problem
16. Disks and RAM memory management
17. Demand paging
18. Resource security, defenses mechanism
19. Shell properties and tasks
20. Basic shell commands: test, grep, getopts
21. Text manipulation programs: awk, sed
22. Programming in bash language, script role
23. Script writing guidelines, parameters control
24. Operating system services
25. Operating system installation and configuration

	26. Operating system administration issues		
	27. Basic properties of the MS Windows operating system		
	28. Domain administration on the MS Windows server		
	29. Open Source and Free Software issues		
	30. Linux features, its distribution, cdlinux.pl		
Prerequisites and co-requisites	No requirements		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Written exam	50.0%	50.0%
	Practical exercise	50.0%	50.0%
Recommended reading	Basic literature	1. Silberschitz A. ed. : Podstawy systemów operacyjnych, PWN, 1991, 2. Prata S.: Biblia systemu UNIX V, LT&P, 1994, 3. Southerton A. ed. : Słownik poleceń systemu UNIX, WNT, 1995, 4. Nemeth E. ed. : Przewodnik administratora systemu UNIX, NT, 1998, 5. Kaczmarek J.: Szkoła systemu Linux, Helion, 2007.	
	Supplementary literature	No requirements	
	eResources addresses		
Example issues/ example questions/ tasks being completed			
Work placement	Not applicable
