

Subject card

Subject name and code	Optimization in Automatics II, PG_00047576						
Field of study	Automatic Control, Cybernetics and Robotics						
Date of commencement of studies	October 2020	Academic year of realisation of subject				2021/2022	
Education level	first-cycle studies	Subject group				Obligatory subject group in the field of study Subject group related to scientific research in the field of study	
Mode of study	Full-time studies	Mode of delivery				at the university	
Year of study	2	Language of instruction				Polish	
Semester of study	4	ECTS credits				1.0	
Learning profile	general academic profile	Assessment form				assessment	
Conducting unit	Department of Decision Systems and Robotics -> Faculty of Electronics, Telecommunications and Informatics						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Henryk Kormański				
	Teachers		dr inż. Henryk Kormański dr inż. Krystyna Rudzińska-Kormańska				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	0.0	0.0	15.0	0.0	0.0	15
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	15		1.0		9.0	25
Subject objectives	Practical knowledge of static optimization algorithms and their application in automation.						
Learning outcomes	Course outcome		Subject outcome			Method of verification	
	[K6_U09] can carry out a critical analysis of the functioning of existing technical solutions and assess these solutions, as well as apply experience related to the maintenance of technical systems, devices and facilities typical for the field of studies, gained in the professional engineering environment		Is able to use optimization methods when solving problems in various fields.			[SU4] Assessment of ability to use methods and tools	
	[K6_U01] can apply mathematical knowledge to formulate and solve complex and non-typical problems related to the field of study and perform tasks, in an innovative way, in not entirely predictable conditions, by:n- appropriate selection of sources and information obtained from them, assessment, critical analysis and synthesis of this information,n- selection and application of appropriate methods and toolsn		He can formulate the problem of optimization in mathematical form and solve it by numerical methods.			[SU4] Assessment of ability to use methods and tools	

Subject contents	1. Familiarization with specialized OPTIMUM software for solving OS and problems research on optimization algorithms. 2. Familiarization with the VISUAL program for graphical presentation (2D, 3D) of the objective function, equality and inequality constraints and stepwise operation of the algorithms. 3. Examination of numerical properties of optimization algorithms without restrictions. 4. Examination of numerical properties of optimization algorithms with constraints 5. Troubleshooting optimal control problems for static objects using the OPTIMUM package. 6. Overview and discussion of the most interesting solutions.		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
Recommended reading	laboratory grade	50.0%	100.0%
Example issues/ example questions/ tasks being completed	Basic literature 1) Lecture Optimization Principles in Automation. 2) Laboratory instructions.		
Work placement	Not applicable		
Supplementary literature	J.Nocedal, S.J.Wright, "Numerical Optimization", Springer, 1999
