

Subject card

Subject name and code	Pneumatics and Hydraulics in Automatic Control and Robotics, PG_00047601						
Field of study	Automatic Control, Cybernetics and Robotics						
Date of commencement of studies	October 2020	Academic year of realisation of subject			2022/2023		
Education level	first-cycle studies	Subject group			Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	3	Language of instruction			Polish		
Semester of study	5	ECTS credits			4.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Department of Mechanics and Mechatronics -> Faculty of Mechanical Engineering and Ship Technology						
Name and surname of lecturer (lecturers)	Subject supervisor	dr hab. inż. Ryszard Jasiński					
	Teachers	dr hab. inż. Ryszard Jasiński dr inż. Marcin Bąk dr inż. Piotr Patrosz					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	30.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		4.0		51.0	100
Subject objectives	Student describes construction and principle of operation of components and drive systems, hydraulic, electrohydraulic, pneumatic, electropneumatic control used in automation and robotics. Student selects basic components to hydraulic, electrohydraulic, pneumatic, electropneumatic drive and control systems. Student builds basic hydraulic, pneumatic systems. Student takes measurements. Student analyzes results of measurements.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K6_W02] Knows and understands, to an advanced extent, selected laws of physics and physical phenomena as well as methods and theories explaining the complex relationships between them, constituting the basic general knowledge in the field of technical sciences related to the field of study	Student knows and understands at an advanced level selected physical laws and phenomena as well as methods and theories explaining the operation of elements and systems of hydraulic, electrohydraulic, pneumatic and electropneumatic drive and control used in automation and robotics.	[SW1] Assessment of factual knowledge
	[K6_U06] can analyse the operation of components, circuits and systems related to the field of study, measure their parameters and examine technical specifications	Student selects the basic elements for hydraulic, electrohydraulic, pneumatic and electropneumatic systems of drive and control. Student builds basic hydraulic and pneumatic systems. Student takes measurements. Student analyzes the results of the measurements.	[SU1] Assessment of task fulfilment [SU2] Assessment of ability to analyse information
	[K6_W03] Knows and understands, to an advanced extent, the construction and operating principles of components and systems related to the field of study, including theories, methods and complex relationships between them and selected specific issues - appropriate for the curriculum	Student describes the structure and principle of operation of elements and systems of hydraulic, electrohydraulic, pneumatic and electropneumatic drive and control used in automation and robotics.	[SW1] Assessment of factual knowledge
Subject contents	Lecture: General information about pneumatic and hydraulic drives. Hydrostatics. Fluid dynamics. Flow equations. Development and applications of pneumatic systems in modern technology. Development and applications of hydraulic systems in modern technology. Basic elements and units of hydraulic drive and control. Applications of electrohydraulics and electronics in hydraulic drive and control systems. Generation of compressed air. Modern control systems of compressors. Basic pneumatic elements and basic pneumatic drive and control systems. Units of compressed air preparation. Elements and units converting energy of compressed air into mechanical energy. Elements controlling air flow and pressure. Comparison of pneumatic switching devices with electric and electronic devices. 6. Basic systems of pneumatic drive and control. Automation of pneumatic systems cycle. Measurements and control in laboratory of hydraulics and pneumatics. Automation of technologic and transport systems by applying pneumatics and hydraulics. Positioning of pneumatic and hydraulic driving systems. Pneumatic cylinders and step motors. Control of pneumatic systems of sequence operation. Hydraulic control, speed stabilization. Control systems with hydraulic proportional and hydraulic servo valves. Characteristics of servo valves. Examples of applications of proportional and servo.		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Midterm colloquium	56.0%	60.0%
	Practical exercise	56.0%	40.0%
