

GDAŃSK UNIVERSITY

Subject card

Subject name and code	Basics of Electronics and Metrology, PG_00047648							
Field of study	Informatics							
Date of commencement of studies	October 2020		Academic year of realisation of subject		2020/2021			
Education level	first-cycle studies		Subject group		Obligatory subject group in the field of study			
Mode of study	Full-time studies		Mode of delivery		at the university			
Year of study	1		Language of instruction		Polish			
Semester of study	2		ECTS credits		3.0			
Learning profile	general academic profile		Assessment form			assessment		
Conducting unit	Department of Metrology and Optoelectronics -> Faculty of Electronics, Telecommunications and Informatics							
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Sylwia Babicz-Kiewlicz					
	Teachers		dr hab. inż. Wiesław Kordalski					
			mgr inż. Tomasz Chludziński					
			drint Daria Majabrawiaz					
			dr inż. Stanisław Galla					
			dr inż. Sylwia Babicz-Kiewlicz					
Lesson types and methods	Lesson type	Lecture	Tutorial	Laboratory	Project	t	Seminar	SUM
of instruction	Number of study hours	30.0	0.0	30.0	0.0		0.0	60
	E-learning hours included: 0.0							
	Adresy na platformie eNauczanie:							
	Podstawy Elektroniki i Metrologii 2021 - Moodle ID: 8812 https://enauczanie.pg.edu.pl/moodle/course/view.php?id=8812							
Learning activity and number of study hours	Learning activity	Participation in didaction classes included in stupplan		Participation in consultation hours		Self-study		SUM
	Number of study hours	60		2.0		13.0		75
Subject objectives	Acquirement of basic knowledge and skills in the field of electronics and metrology							

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K6_W06] Knows and understands the basic processes occurring in the life cycle of devices, facilities and systems specific to a given field of study.	Student knows and understands the processes that cause the uncalibration of measuring instruments. Is able to determine and qualify the reasons for the change of the boundary error value of the device. Understands the need to operate the device under certain conditions and the risk associated with working outside the rated conditions.	[SW1] Assessment of factual knowledge
	[K6_W05] Knows and understands, to an advanced extent, methods of supporting processes and functions, specific to the field of study	Student understands the concept of the measurement system. Knows the simplified construction and tasks of the measuring system. Recognizes the need to properly build the system in the context of performed tasks. Kows alternative programming environments used in building a measurement system.	[SW1] Assessment of factual knowledge
	[K6_U05] can plan and conduct experiments related to the field of study, including computer simulations and measurements; interpret obtained results and draw conclusions	Student calibrates analog and digital electrical meters. Performs measurements of basic electrical parameters: voltage, current, resistance, power and energy. Explores measurement functions of analog and digital oscilloscope. Measures signal parameters: time, frequency, phase shift. Student organizes measurement system and measures parameters of selected A/D converters. Analyzes measurement results and evaluate measurement accuracy. Student defines signal types and timings. Recognizes basic properties of periodic and non-periodic signals spectrum. Classifies signal sources and RC circuits. Describes operational amplifiers and RC and relaxation oscillators. Explains digital measurement methods of time, frequency and phase shift. Describes rules of voltage to digital code conversion. Student recognizes architecture and operation modes of analog and digital oscilloscope. Classifies measurement systems and interfaces. Performs measurement system and measures parameters of selected A/D converters. Explores basic układy pracy tranzystora. Performs measurement of frequency amplifiers.	[SU4] Assessment of ability to use methods and tools [SU3] Assessment of ability to use knowledge gained from the subject [SU2] Assessment of ability to analyse information [SU1] Assessment of task fulfilment
	[K6_U02] can perform tasks related to the field of study in an innovative way as well as solve complex and nontypical problems, applying knowledge of physics, in changing and not fully predictable conditions	Student performing experiments on a analyzes their course and effect in real time. Is able to predict the expected result of the measurement and react in case of the wrong course of the experiment. Understands the basic electrical phenomena occurring in electronic systems and can use this knowledge during the experiment.	[SU4] Assessment of ability to use methods and tools [SU3] Assessment of ability to use knowledge gained from the subject [SU2] Assessment of ability to analyse information [SU1] Assessment of task fulfilment

	Course outcome	Subject outcome	Method of verification			
	[K6_W42] Knows and understands, to an advanced extent, architecture, design principles and methods of hardware and software support for local and distributed information systems, including computing systems, databases, computer networks and information applications, as well as the principles of human cooperation with computers and computer- aided teamwork	Student understands the concept of the measurement system. Performs experiments using ddicated programs and computer- assisted measurement equipment.	[SW3] Assessment of knowledge contained in written work and projects			
Subject contents	 Introduction to basic of electronics. 2. Electronic signals: kind and their cours time, into it : detailed description of harmonical signal, AM, FM, PM signals. 3. Spectrum of periodic signals: Fourier sequence, examples of signals abouy different spectra, into it spectrum of rec-tangular wave and AM signal. 4. Distortions of periodic signals: unlinear distortions (intermodulation) and linear distortions, influence of freguency characteristic of road on form of signal, typical distortions of rectangular wave. 5. Spectrum of periodic signal: Fourier integral, spectrum of rectangular pulse, spectrum of acoustic and video signals. 6. Noises, digital signals and principles of convertion of analog signals to didital signals, into it Nyquist condition. 7. Sources of signals, electric sources and measures of signals, into it: a statement about supplementary source, electronic circuits as sources of signals, absolute and relative signals. 8. RC circuits and their influence on electronic signals: switching of circuit, integral and compensate circuits, quartz resonator. Detection, demodulation and decoding of sugnals. 11. Amplification of signals transistors. 12. Amplifier with negative feedback, differential amplifier, push-pull and operational amplifier. 13. Harmonic generators. Relaxetion oscilators. 15. Signal synchronisation. 16. Introduction. Basic metrological terms: measurement, converter, measuring instrument and system, measurement errors, standard and extended uncertainty. 17. Analog oscilloscope: Block diagram, principles of operation. 18. Time base generator, triggering methods. 20. Digital methods of time-interval measurements. 23. Classification and characterization of digital voltage measurements methods. 24. Dual-slope integration ADC. 25. Voltage to frequency integration ADC. 26. DACs with binary weighted resistors and R-2R ladder. 27. Compensation ADC with successive-approximation. 28. Flash ADC. 29. Measurements of AC voltage, AC/DC converters of true RMS value.					
and co-requisites						
Assessment methods and criteria	Subject passing criteria Practical exercises	Passing threshold 50.0%	Percentage of the final grade 50.0%			
Recommended reading	Basic literature	50.0%	50.0%
