	[K6_U01] can apply mathematical knowledge to formulate and solve complex and non-typical problems related to the field of study and perform tasks, in an innovative way, in not entirely predictable conditions, by:- appropriate selection of sources and information obtained from them, assessment, critical analysis and synthesis of this information,n-selection and application of appropriate methods and toolsn		Student solves equations and inequalities with elementary functions. Student solves exercises involving arithmetic and geometric sequences. Student geometrically interprets the results of an examination of a graph of a function using the concept of limit, continuity and derivatives of functions.		[SU4] Assessment of ability to use methods and tools				
	[K6_W01] Knows and understands, to an advanced extent, mathematics necessary to formulate and solve simple issues related to the field of study		Student mentions basic properties of elementary functions. Student defines the basic concepts of differential calculus of one variable. Student analyses the properties of functions on the basis of an examination of its first and second derivatives.		[SW1] Assessment of factual knowledge
