

Subject card

Subject name and code	MATHEMATICS II, PG_00052599						
Field of study	Architecture						
Date of commencement of studies	October 2020		Academic year of realisation of subject		2020/2021		
Education level	first-cycle studies		Subject group		Obligatory subject group in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		English		
Semester of study	2		ECTS credits		3.0		
Learning profile	general academic profile		Assessment form		exam		
Conducting unit	Faculty of Electronics, Telecommunications and Informatics						
Name and surname of lecturer (lecturers)	Subject supervisor		dr Magdalena Musielak				
	Teachers		dr Magdalena Musielak				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	30.0	0.0	0.0	0.0	45
	E-learning hours included: 0.0						
	Adresy na platformie eNauczanie: WA - Architektura - Mathematics II 2020/21 (M.Musielak) - Moodle ID: 13335 https://enauczenie.pg.edu.pl/moodle/course/view.php?id=13335						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		5.0		25.0	75
Subject objectives	Students obtain competence in using methods of mathematical analysis (single variable calculus) and knowledge how to solve simple problems that are found in the field of engineering, in particular connected to data engineering.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K6_U04] is able to use analytical methods to formulate and solve project tasks		Student applies the concepts of limit, continuity, and derivatives of functions to solve curve sketching problems. Student uses definite integral to solve geometrical problems		[SU4] Assessment of ability to use methods and tools		
	[K6_W01] knows and understands construction problems, building and engineering issues related to building design; principles, solutions, constructions and building materials used in simple engineering tasks in the field of architectural and urban design		Student defines basic concepts of differential and integral calculus on single-variable function. Student gives the graphical interpretation of definite integral. Student lists geometrical applications of definite integrals		[SW1] Assessment of factual knowledge		

Subject contents	<ul style="list-style-type: none">• Partial derivatives• Double integral over a rectangular region. Change of variables in double integral. Applications• Continuity.• Derivative of a function of one variable. Geometrical and physical interpretation. Basic differentiation formulas.• Product, quotient, and chain rules.• Applications of differentiation. Optimization. Concavity.• Indefinite integral. Basic formulas. Integration by parts, by substitution• Definite integral. Geometrical interpretation. Fundamental Theorem of Calculus.• Geometrical applications of definite integrals: areas, volumes, lengths.• Partial derivatives• Double integral over rectangular and normal regions. Change of variables in double integral. Applications		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Final Exam	50.0%	80.0%
	Homework assignments	0.0%	20.0%
Recommended reading	Basic literature	<ul style="list-style-type: none">• H. Anton, <i>Calculus with analytic geometry</i>, John Wiley & Sons, 1989.• <i>Matematyka. Podstawy z elementami matematyki wyższej</i>, edited by B. Wikieł, PG publishing house• J.Dymkowska, D.Beger, <i>Rachunek różniczkowy w zadaniach</i>, PG publishing hous• J.Dymkowska, D.Beger, <i>Rachunek całkowy w zadaniach</i>, PG publishing house

Example issues/ example questions/ tasks being completed	<ol style="list-style-type: none">1. Find the local extrema and intervals of monotonicity of the function $f(x)=...$2. Find the area between the x-axis and the curves ...3. Find the volume of the solid obtained by rotating about the x-axis, the region bounded by $y=...$4. Evaluate partial derivatives of the given function5. Evaluate the double integral over the given region		
Work placement	Not applicable
