

Subject card

Subject name and code	Building physics and acoustics, PG_00052802						
Field of study	Architecture						
Date of commencement of studies	October 2020		Academic year of realisation of subject			2022/2023	
Education level	first-cycle studies		Subject group			Obligatory subject group in the field of study Subject group related to scientific research in the field of study	
Mode of study	Full-time studies		Mode of delivery			blended-learning	
Year of study	3		Language of instruction			Polish	
Semester of study	5		ECTS credits			3.0	
Learning profile	general academic profile		Assessment form			assessment	
Conducting unit	Department of Technical Fundamentals of Architecture Design -> Faculty of Architecture						
Name and surname of lecturer (lecturers)	Subject supervisor		prof. dr hab. inż. Andrzej Kulowski				
	Teachers		dr inż. arch. Joanna Kabrońska prof. dr hab. inż. Andrzej Kulowski				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	30.0	0.0	0.0	0.0	45
	E-learning hours included: 20.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		5.0		25.0	75
Subject objectives	The student recognizes the basic physical processes in buildings and the relationship between the building and the environment. The student recognizes the mechanism of transmission of sound and vibration in building construction and spread of environmental noise. The student learns the principles of protection and anti-vibration proofing of the building and the environment and the shaping the acoustics of rooms.						
Learning outcomes	Course outcome		Subject outcome			Method of verification	
	[K6_U04] is able to use analytical methods to formulate and solve project tasks		The student evaluates design solutions of the building taking into account the energy quality and the internal environment. The student calculates the thermal and moisture properties of building elements.			[SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools	
	[K6_W01] knows and understands construction problems, building and engineering issues related to building design; principles, solutions, constructions and building materials used in simple engineering tasks in the field of architectural and urban design		The student understands physical phenomena occurring in buildings and between the building and the environment, including issues of heat and moisture, and knows the principles of design that will reduce energy consumption of the building and enable a proper microclimate in the building. The student has knowledge of the mechanism of sound and vibration transmission in buildings and noise propagation in open space, and identifies the parameters and technical information relating to acoustical characteristics of building materials and acoustical requirements of buildings contained in the standards and professional literature.			[SW1] Assessment of factual knowledge [SW2] Assessment of knowledge contained in presentation	

BUILDING PHYSICS

Lectures:

1. Architecture and climate. Energy quality. Energy: introduction
2. Physical phenomena in buildings: basics of heat transfer theory
3. Inhomogeneous layers and thermal bridges
4. Humidity and moisture protection
5. Energy performance. Requirements. Certification

Tutorials:

1. Relationship between the building and the environment - various aspects
2. Thermal and moisture properties of building elements

ACOUSTICS

Lectures:

1. Physics of sound. Acoustic pressure, decibel, sound level, sound spectrum, range of hearing. airborne and material sound.
2. Room acoustics. Acoustical phenomena in rooms. Acoustical parameters of rooms.
3. Acoustical properties of finishing materials and elements of room equipment, sound absorption coefficient.
4. Shaping of acoustics of rooms. Influence of function, form, and interior of a hall on its acoustics.
5. Building acoustics. Mechanism of propagation sound and vibrations in buildings. Air-borne and material-born sound. Installation noise.
6. Acoustical properties of building materials. Acoustical insulation of partitions. Law mass.
7. Protection of the building against noise and vibrations. Positioning of buildings with respect to external sources of noise and vibration, protection against soil-borne vibrations, layout of rooms, preventing the transmission of noise and vibration in the building.
8. Urban acoustics protection of buildings, groups of buildings and urban interiors against noise
9. Acoustical climate of the town. Parameters of acoustical climate. Acoustic plan of the city - synthetic and analytical, current and predictive. Noise maps.
10. Environmental acoustics. Propagation of sound in open space. Influence of wind and temperature. Noise suppression by the surface of the soil with various types of coverage.
11. Protection of terrain against industrial noise. Wind turbine noise.

	12. Aircraft noise. Noise induced degradation of terrain function. Area of restricted use.		
	13. Acoustics in construction law. Protection of the building, built-up area and the land against the noise and vibrations in the light of Polish Standards and accompanying regulations		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Presentation	100.0%	20.0%
	Test	51.0%	30.0%
	Calculation task	100.0%	50.0%
