

Subject card

Subject name and code	Building structures and technologies II, PG_00052806						
Field of study	Architecture						
Date of commencement of studies	October 2020		Academic year of realisation of subject		2022/2023		
Education level	first-cycle studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	3		Language of instruction		Polish		
Semester of study	5		ECTS credits		1.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Department of Technical Fundamentals of Architecture Design -> Faculty of Architecture						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Karol Grębowski				
	Teachers		dr inż. Karol Grębowski				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	0.0	0.0	0.0	15
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	15		1.0		9.0	25
Subject objectives	The student recognizes the basic problems in the field of solving problems related to steel and wooden structures. Presents knowledge on the relationship between loads and stresses and deformations in simple building elements made of steel and wooden structures. Explains the principles of dimensioning and determining the load-bearing capacity of simple elements in steel and wooden structures. Designs basic elements of steel and wooden structures (beams, binders, columns and trusses).						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K6_U02] is able to design an architectural object or a simple urban complex that meets the aesthetic and technical requirements				[SU1] Assessment of task fulfilment [SU2] Assessment of ability to analyse information [SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools [SU5] Assessment of ability to present the results of task		
	[K6_W01] knows and understands construction problems, building and engineering issues related to building design; principles, solutions, constructions and building materials used in simple engineering tasks in the field of architectural and urban design				[SW2] Assessment of knowledge contained in presentation [SW3] Assessment of knowledge contained in written work and projects		

Subject contents	LECTURES: Introductory information, the characteristics of such materials as steel, aluminum, wood in the context of their use in building structures. Advantages and disadvantages of steel and wooden structures. General characteristics of steel construction. Historical outline of metal structures. Steel as a building material. Outline of steel manufacturing technology. Steel grades and mechanical properties. Steel products. Basic relations for the dimensioning of steel structure elements in accordance with the applicable standards: ultimate limit state (tension, bending, compression), limit state of use. General principles of designing full-wall girders - rolled beams, binders - plate girders General principles of designing lattice girders General principles of designing single and multi-span columns. Types of fasteners, rivets, bolts, welds - general principles of connection design. Bracing in steel structures - the role of braces in ensuring the stability of the structure. General characteristics of wooden construction, historical outline. Wood as a building material. Wood species and mechanical properties. General dependencies for the dimensioning of wooden structure elements: ultimate limit state (tension, bending, compression), limit state of use. Joints in wooden structures, types and design principles. General principles of designing full-walled girders, ceiling beams, elements made of glued laminated timber. General principles of designing roof trusses and lattice girders. General principles of designing single and double-branch poles. Protection of steel and wooden structures against corrosion and fire.		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
		60.0%	100.0%
