

Subject card

Subject name and code	Prediploma project, PG_00053064						
Field of study	Architecture						
Date of commencement of studies	October 2020		Academic year of realisation of subject		2022/2023		
Education level	first-cycle studies		Subject group		Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	3		Language of instruction		Polish		
Semester of study	6		ECTS credits		6.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Department of Environmental Design -> Faculty of Architecture						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. arch. Dorota Wojtowicz-Jankowska				
	Teachers		dr hab. inż. arch. Agnieszka Gębczyńska-Janowicz				
			dr inż. arch. Jarosław Bąkowski				
			mgr inż. arch. Jacek Droszcz				
			dr inż. arch. Jacek Poplatek				
			dr inż. arch. Małgorzata Skrzypek-Łachinińska				
			dr inż. arch. Agnieszka Błażko				
			mgr inż. arch. Stanisław Dopierała				
			mgr inż. arch. Agnieszka Malinowska				
			dr inż. arch. Karolina Życzkowska				
			dr inż. arch. Agnieszka Kurkowska				
			mgr inż. arch. Alicja Karaś				
			dr hab. inż. arch. Robert Idem				
			dr inż. arch. Piotr Marczak				
			dr inż. arch. Tomasz Szymański				
			dr inż. arch. Elżbieta Marczak				
dr inż. arch. Marek Gawdzik

Subject objectives	The aim of the course is to develop a concept for the architectural design of a building with an area of up to 2000 m2. The architectural concept is to solve the problem of locating an object with a specific function in the structure of urbanized space, taking into account pro-environmental solutions.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K6_W02] knows and understands the rules of gathering information and their interpretation as a part of project concept preparation; issues related to architecture and urban planning in the field of simple design problems solving	The student is able to develop a land development project, formulate the program of the facility, propose spatial solutions based on the analysis of source materials in the form of an architectural project.	[SW3] Assessment of knowledge contained in written work and projects
	[K6_U01] is able to use the experience gained during studies to critically analyze the conditions and formulate conclusions for design in an interdisciplinary context	The student is able to analyze the design area	[SU2] Assessment of ability to analyse information
	[K6_K02] is ready to respect the diversity of views and cultures and to show sensitivity to the social aspects of the profession	The student is able to discuss and express his views while working with other people cooperating with him.	[SK1] Assessment of group work skills
	[K6_U04] is able to use analytical methods to formulate and solve project tasks	The student collects information in professional literature and legal acts.	[SU4] Assessment of ability to use methods and tools
	[K6_K01] is ready to comply with the principles of professional ethics and take responsibility for his/her actions	The student performs the project independently using the knowledge acquired during the studies.	[SK4] Assessment of communication skills, including language correctness
Subject contents	<p>The design task is to develop an architectural concept of a building with an area of net up to approx. 2000 m² and land development project. Each department/design studio proposes the function and location of the facility. In consultation with the person conducting the project, the student may propose the function and location of the object. The indicated area must always be covered by the local zoning plan or have a technical specification. The project should be composed of min. 2 boards of B1 format (100x70 cm) in a horizontal arrangement. I. The descriptive part (the so-called "booklet" of A4 format) should contain: 1. Cover page 2. Contents 3. Design problem study (elements) including: A. Analyze a) examples of objects with a function analogous to the designed one (functional, spatial, structural solutions) b) the location and urban context of the situation c) the provisions of the Local Development Plan or the decision on development conditions B. Design Guidelines C. Descriptions a) the idea of the project b) the urban part (as in the plot or land development project) c) the architectural part (as in the architectural and construction project) d) structural part e) installation part** Guidelines and editorial requirements for the descriptive part can be found on the website of the Faculty of Architecture in the Engineering Diploma tab: https://cdn.files.pg.edu.pl/arch/Dziedkanat/ogolne/dyplomowe/ZR%2053-2022_wytyczne%20edytorskie.pdf. f) Drawing part containing: A. architectural part a) the concept of the land development project (1:500) b) floor plans (1:200) c) roof projection (scale to be agreed) d) 2 characteristic sections (1:200) e) elevations taking into account the cross-section through the area (including the underground storey, if required by the function or form) containing material and color solutions (1:200) f) silhouette of the facility with neighboring buildings (scale to be agreed) g) axonometry/perspectives h) sketches presenting the adopted idea, conceptual assumptions, urban analyses, schematic diagrams, slogan, etc. B. construction and installation part a) the concept of the main structure of the building (e.g. axonometry), in terms of the structural system of the building along with the floor and roof layout b) basic elements of the building's technical service - diagram of the installation system (indication of technical rooms, installation shafts) The scale of the project development - 1:200, in justified cases, the scale of 1:100 is acceptable.</p>
