

## Subject card

| Subject name and code                       | CHEMISTRY AND TECHNOLOGY OF POLYMERS, PG_00036531   |   |   |            |  |   |                        |     |  |
|---|---|---|---|------------|--|---|------------------------|-----|--|
| Field of study                              | Chemistry   |   |   |            |  |   |                        |     |  |
| Date of commencement of studies             | October 2020  |   | Academic year of realisation of subject   |            |  | 2022/2023   |                        |     |  |
| Education level                             | first-cycle studies   |   | Subject group   |            |  | Optional subject group Subject group related to scientific research in the field of study |                        |     |  |
| Mode of study                               | Full-time studies   |   | Mode of delivery  |            |  | at the university   |                        |     |  |
| Year of study                               | 3   |   | Language of instruction   |            |  | Polish  |                        |     |  |
| Semester of study                           | 5   |   | ECTS credits  |            |  | 3.0   |                        |     |  |
| Learning profile                            | general academic profile  |   | Assessment form   |            |  | assessment  |                        |     |  |
| Conducting unit                             | Department of Polym   | Department of Polymers Technology -> Faculty of Chemistry |   |            |  |   |                        |     |  |
| Name and surname                            | Subject supervisor  |   |   |            |  |   |                        |     |  |
| of lecturer (lecturers)                     | Teachers  |   |   |            |  |   |                        |     |  |
| Lesson types and methods                    | Lesson type   | Lecture   | Tutorial  | Laboratory | Projec   | :t  | Seminar                | SUM |  |
| of instruction                              | Number of study hours   | 30.0  | 0.0   | 15.0       | 0.0  |   | 0.0                    | 45  |  |
|   | E-learning hours included: 0.0  |   |   |            |  |   |                        |     |  |
| Learning activity and number of study hours | Learning activity Participation in classes include plan   |   |   |            |  | Self-study SUM  |                        | SUM |  |
|   | Number of study 45 hours  |   |   | 5.0        |  | 25.0  |                        | 75  |  |
| Subject objectives                          | The aim of the course is to familiarize students with the basic knowledge of macromolecular compounds,methods of their preparation, testing, properties and application.  |   |   |            |  |   |                        |     |  |
| Learning outcomes                           | Course outcome Subject outcome  |   |   |            |  |   | Method of verification |     |  |
|   | [K6_U01] knows how to get information from literature, databases and other sources, can integrate the information obtained, interpret and critically evaluate it, and draw conclusions, and to formulate and justify the opinions   |   | The student is able to search from databases data information about polymers, syntheses and new techniques for their modification |            |  | [SU1] Assessment of task fulfilment [SU2] Assessment of ability to analyse information    |                        |     |  |
|   | [K6_W07] has knowledge about basic polireactions making possible the production of various macromolecular compounds, including the idea of creating blends and polymer composites for specific applications   |   | The student is able to name which types of polirements can be obtained polymer and from what monomers                             |            |  | [SW3] Assessment of knowledge contained in written work and projects                      |                        |     |  |
|   | [K6_U06] can analyze the functioning of equipment, apparatus and technology lines used in laboratories and chemical industry, and can recognize and propose methods to solve the simple engineering tasks which he can meet as an Engineer and select and use routine methods, chemical apparatus and tools to solve practical engineering tasks, including also technological processes; can himself/herself read and make technical drawings using CAD software |   | The student is able to choose a method processing to the group of polymers  |            | [SU3] Assessment of ability to use knowledge gained from the subject [SU1] Assessment of task fulfilment |   |                        |     |  |

Data wydruku: 10.04.2024 20:30 Strona 1 z 2

| Subject contents   | Basic terms: mer, monomer, oligomer, polymer, dispersibility, types of bonds in the main chain, macromolecular compounds and polymers, thermo resins and chemoplasts. Classification of monomers and polyreactions. Radical polyaddition, polyaddition, polycondensation, anionic, cationic and coordination polymerization stages. Copolymerization and types of copolymers: statistical, block, graft, dendrimers, starry copolymer etc. Characteristics and examples of practical applications of thermoplastics, thermo and chemically hardenable compounds, elastomers, rubbers, rubbers, - technologies of their preparation. Parameters and methods characterizing their properties. |   |                               |  |  |  |
|--|---|---|-------------------------------|--|--|--|
| Prerequisites and co-requisites                                |   |   |                               |  |  |  |
| Assessment methods and criteria                                | Subject passing criteria  | Passing threshold   | Percentage of the final grade |  |  |  |
|  |   | 60.0%   | 60.0%                         |  |  |  |
|  |   | 60.0%   | 40.0%                         |  |  |  |
