

Subject card

Subject name and code	ANALYTICAL CHEMISTRY, PG_00053081								
Field of study	Chemistry								
Date of commencement of studies	October 2020	Academic year of realisation of subject		2021/2022					
Education level	first-cycle studies	Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study					
Mode of study	Full-time studies	Mode of delivery		at the university					
Year of study	2	Language of instruction		Polish					
Semester of study	3	ECTS credits		8.0					
Learning profile	general academic profile	Assessment form		exam					
Conducting unit	Department of Analytical Chemistry -> Faculty of Chemistry								
Name and surname of lecturer (lecturers)	Subject supervisor	prof. dr hab. inż. Piotr Konieczka							
	Teachers	prof. dr hab. inż. Piotr Konieczka  dr inż. Małgorzata Rutkowska  prof. dr hab. inż. Bożena Zabiegala  dr inż. Weronika Hewelt-Belka  dr hab. inż. Mariusz Marć  dr inż. Paweł Kubica							
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM		
	Number of study hours	45.0	0.0	60.0	0.0	15.0	120		
	E-learning hours included: 0.0								
Adresy na platformie eNauczanie: Chemia Analityczna - wykład - Moodle ID: 19047 <a href="https://enauznanie.pg.edu.pl/moodle/course/view.php?id=19047">https://enauznanie.pg.edu.pl/moodle/course/view.php?id=19047</a>									
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours	Self-study	SUM			
	Number of study hours	120		10.0	70.0	200			
Subject objectives	The role, place and task analysis, the analytical process, analytical signal; collection and preparation of samples for analysis; analytical methods (methods of primary and absolute, indirect methods); theoretical base and a description of the selected analytical methods (gravimetry, volumetric acid-base titration, precipitation titration, redox titration, complexometry; electroanalysis; spectroscopic techniques, chromatographic techniques and related analytical methods validation parameters-characterization;.								
Learning outcomes	Course outcome		Subject outcome		Method of verification				
	K6_W03		Has a basic knowledge of trends in the area of theoretical chemistry		[SW3] Assessment of knowledge contained in written work and projects				
	K6_U07		Can make accurate and precise measurement in the analytical laboratory		[SU1] Assessment of task fulfilment				
	[K6_K03] understands the importance of group and team activities in which members adopt various roles		Understand the importance of group's activities		[SK2] Assessment of progress of work				

Subject contents	Lecture: The role and the place and tasks chemical analytical process, signal analytical; the collection and preparation of samples for analysis; the analytical methods (primary methods and absolute, indirect method); bases theoretical selected and a description of the analytical methods (gravimetry, volumetry, titration, redoxometry, complexometry, electroanalytical techniques, spectroscopic techniques ; chromatographic techniques, characteristics of the analytical method- validation parameters. The Seminar: Presentation of analytical result, the uncertainty, significant figures; gravimetric analysis, volumetric techniques, titration curves calculation; bases statistics in chemical metrology. Laboratory: Health and safety rules, the correct weighing, handling of volumetric equipment; adjustment titre NaOH; determination of H <sub>2</sub> SO <sub>4</sub> content by titration technique; determination of CH <sub>3</sub> COOH content; the determination of Cl- in the water-precipitation titration; the determination of iron-gravimetric analysis; the determination of Ca and Mg side by side-complexometry; the determination of Cu-redoxometric and electrogravimetric titration; adjustment titre of KMnO <sub>4</sub> ; statistical treatment of analytical results; spectroscopic techniques; gas chromatography;				
Prerequisites and co-requisites	Student should have knowledge of the: stoichiometry, chemical reaction equilibrium, reactions and theory of acids and bases, precipitation reaction, solubility product, reaction mechanism, complex formation constant				
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade		
	exam	60.0%	55.0%		
	laboratory	60.0%	25.0%

	eResources addresses	Chemia Analityczna - wykład - Moodle ID: 19047 <a href="https://enauuczanie.pg.edu.pl/moodle/course/view.php?id=19047">https://enauuczanie.pg.edu.pl/moodle/course/view.php?id=19047</a>			
Example issues/example questions/tasks being completed	1. Provide characteristics and conclusions regarding the acid-base/precipitation/complexometric/redoxmetry titration curve. 2. Describe Warder's method determination NaOH and Na <sub>2</sub> CO <sub>3</sub> . 3. Specify the characteristics and requirements of the base substance. 4. Characterize titration types: direct, indirect, and reverse. 5. Fajans indicators principle and application. 6. The composition and explain the roles of the individual components of the Reinhardt-Zimmermann mixture (manganometric determination of iron ions). 7. Characteristics of the precipitate in the weighing analysis. 8. What are the optimal precipitate conditions in weight analysis? 9. What are the causes of over voltage in electrogravimetry? 10. What affects the representativeness of the sample at the sampling stage? 11. Specify the differences (apparatus, range of applications, measurement beings) between atomic absorption spectroscopy techniques with flame atomization and flame photometry. 12. What are the components of the basic chromatographic system? 13. Range of elementary analysis applications in analytical chemistry. 14. List the calibration techniques and describe one of them. 15. List the electroanalytical techniques used in analytical chemistry and characterize one of them.				
Work placement	Not applicable
