

Subject card

Subject name and code	Heat flows, PG_00051075						
Field of study	Technical Physics						
Date of commencement of studies	October 2020	Academic year of realisation of subject			2022/2023		
Education level	first-cycle studies	Subject group			Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	3	Language of instruction			Polish		
Semester of study	6	ECTS credits			4.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Instytut Fizyki i Informatyki Stosowanej -> Faculty of Applied Physics and Mathematics						
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Sebastian Bielski					
	Teachers	dr inż. Sebastian Bielski					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	15.0	15.0	0.0	60
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study	SUM	
	Number of study hours	60	5.0		35.0	100	
Subject objectives	Presentation of basic knowledge concerning the heat transfer mechanisms. Application of analytical and numerical methods to solve the heat conduction problems.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	K6_W02	Students present the heat transfer mechanisms. Students give the definitions of the quantities describing the heat transfer processes. Students present methods used for the analytical description of the heat conduction. Students come to conclusions on the influence of the parameters describing a heat-conducting system on the time evolution of temperature. Students present quantities and laws used in the analysis of the thermal radiation.			[SW1] Assessment of factual knowledge		
	K6_U02	Students find solutions to the heat conduction problems by using analytical and numerical methods (Matlab).			[SU1] Assessment of task fulfilment [SU4] Assessment of ability to use methods and tools		

Subject contents	<p>Lecture:</p> <ol style="list-style-type: none"> 1. Preliminaries. <ol style="list-style-type: none"> 1.1. Definitions. 1.2. Heat transfer mechanisms: conduction, convection, thermal radiation. 1.3. Quantities and laws describing the heat transfer: conduction, Newton's law of cooling, radiation. 2. Equations describing the heat transfer. <ol style="list-style-type: none"> 2.1. Thermal conductivity. 2.2. The temperature field. 2.3. The heat equation. 2.4. Boundary conditions. 3. Stationary heat conduction with no heat sources. <ol style="list-style-type: none"> 3.1. 1-dimensional case. 3.2. Multilayered walls. 3.3. 2-dimensional case. 4. Stationary heat conduction with heat sources. <ol style="list-style-type: none"> 4.1. The heat equation in case of the presence of the heat sources. 4.2. 1-dimensional cases of the heat conduction. 5. Non-stationary heat conduction. <ol style="list-style-type: none"> 5.1. Infinite wall. 5.2. A rod with insulated lateral surface. 5.3. Sphere. 5.4. Cylinder. 5.5. 2-dimensional case. 5.6. Non-stationary heat conduction in presence of the heat sources. 5.7. 1-dimensional cases, time-dependent boundary conditions. 5.8. The Pennes equation. 6. Convection <ol style="list-style-type: none"> 6.1. Continuity equation 6.2. Navier-Stokes equation 6.3. Energy equation 7. Thermal radiation. <ol style="list-style-type: none"> 7.1. Definitions. 7.2. Emissivity. 7.3. Heat transfer via radiation between two parallel surfaces. <p>Laboratory/Project: Solving stationary and non-stationary heat conduction problems.</p>											
Prerequisites and co-requisites

Example issues/ example questions/ tasks being completed	<ol style="list-style-type: none"> 1. Describe the heat transfer via radiation between two parallel surfaces. 2. Derive the heat diffusion equation. 3. How much energy is radiated each second by one square meter of the black body if the spectral radiance peaks at $\lambda = 484 \text{ nm}$? a) $E = 1.47 \text{ J}$; b) $E = 1.47 \text{ kJ}$; c) $E = 0.735 \text{ J}$; d) none of the values above. 4. Describe the 1-dimensional case of the heat conduction in case of constant heat generation rate. 											
Work placement	Not applicable
