

Subject card

Subject name and code	Mathematics III, PG_00039413						
Field of study	Mechatronics, Mechatronics						
Date of commencement of studies	October 2020	Academic year of realisation of subject	2021/2022				
Education level	first-cycle studies	Subject group	Obligatory subject group in the field of study				
Mode of study	Full-time studies	Mode of delivery	at the university				
Year of study	2	Language of instruction	Polish				
Semester of study	3	ECTS credits	5.0				
Learning profile	general academic profile	Assessment form	assessment				
Conducting unit	Mathematics Center -> Vice-Rector for Education						
Name and surname of lecturer (lecturers)	Subject supervisor	dr Stanisław Domachowski					
	Teachers	dr Stanisław Domachowski					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	30.0	0.0	0.0	0.0	60
	E-learning hours included: 0.0						
WIMiO - Mtr - Matematyka III ćw. 2021/22 (S.Domachowski) - Moodle ID: 17761 https://enauczanie.pg.edu.pl/moodle/course/view.php?id=17761							
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM		
	Number of study hours	60	5.0	60.0	125		
Subject objectives	The aim of this subject is to obtain the student's competence in the range of using the basic methods of mathematical analysis, ordinary differential equations, partial differential equations and probability theory. Furthermore, the student is able to use this knowledge to solve simple theoretical and practical problems that can be found in the field of engineering.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	K6_U03	Student recognizes the importance of self-expanding knowledge and takes the challenge of working with a group to solve a problem.	[SU3] Assessment of ability to use knowledge gained from the subject
	K6_W01	Students calculates double integrals, and explains the method of substitution in the double integral. Student applies double integrals in solving geometrical problems. Student calculates triple integrals, and explains the method of substitution in the triple integral. Student applies triple integrals in geometrical problems. Student calculates the radius of convergence and the interval of convergence of a power series. Student demonstrates some chosen techniques of solving ordinary differential equations. Student determines general and particular solutions of some types of the first and second order differential equations. Student determines general and particular solutions of higher orders linear differential equations with constant coefficients. Student determines general and particular solutions of systems of differential equations. Student determines general and particular solutions of the partial linear differential equations of first order	[SW1] Assessment of factual knowledge
	K6_U01	The student combines knowledge of mathematics with knowledge from other fields.	[SU1] Assessment of task fulfilment
Subject contents	Line integral, vector field. Surface integral, <i>flux integral</i> . Infinite series. Convergence tests for infinite series. Power series. Taylor and Maclaurin series. First order differential equations. General and particular solution of the differential equation. Initial value problem. Separable, linear, Bernoulli and exact differential equations. Integrating factor. Second order differential equations. Linear differential equations of order n with constant coefficients. Fundamental set of solutions of the homogeneous linear differential equation with constant coefficients. Non-homogeneous linear differential equations. Systems of differential equations. Linear first order partial differential equations. Quasi-linear first order partial differential equations. Characteristic equations.		
Prerequisites and co-requisites	No recommendations		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	tests, • Active participation during classes	50.0%	100.0%

	eResources addresses		

<p>Example issues/ example questions/ tasks being completed</p>	<ol style="list-style-type: none"> 1. Check convergence of the series using the ratio test, the root test, the comparison test or the integral test. 2. Calculates the radius of convergence of a power series. 3. Calculatethe the interval of convergence of a power series. 4. Find the general solution of the differential equations. 5. Find the particular solution of the differential equation satisfying the given initial conditions. 6. Find the general solution of the differential equation using the method of variation of parameters . 7. Evaluate the surface integral.
<p>Work placement</p>	<p>Not applicable</p>
