GDAŃSK UNIVERSITY OF TECHNOLOGY

Subject card

Subject name and code	Digital control, PG_00038879					
Field of study	Mechatronics, Mechatronics					
Date of commencement of studies	October 2020		Academic year of realisation of subject	2022/2023		
Education level	first-cycle studies		Subject group	Obligatory subject group in the field of study		
				Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery	at the university		
Year of study	3		Language of instruction	Polish		
Semester of study	6		ECTS credits	3.0		
Learning profile	general academic profile		Assessment form	exam		
Conducting unit	Department of Mechanics and Mechatronics -> Faculty of Mechanical Engineering and Ship Technology					
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Rafał Hein			
	Teachers		dr hab. inż. Rafał Hein			

Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	15.0	0.0	0.0	30
	E-learning hours included: 0.0						
	Address on the e-learning platform: https://enauczanie.pg.edu.pl/moodle/course/view.php?id=10678						

Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM
	Number of study hours	30	7.0	38.0	75

Subject objectives	Presentation of theoretical knowledge of digital control systems. Gaining the skills to design and analyze digital control systems.		
Learning outcomes	Course outcome	Subject outcome	Method of verification
	K6_U04	Student applies the known methods of discrete systems analysis to design, investigations and test digital control systems.	[SU3] Assessment of ability to use knowledge gained from the subject
	K6_W01	Student can transform differential equations into difference and recursive equations. He is able to solve differential equations and the corresponding difference and recursive equations. Has knowledge about the Z transform and uses it to solve recursive equations.	[SW1] Assessment of factual knowledge
	K6_U09	Student can apply the transformation methods of differential equations into the difference and recursive equations in creating algorithms for the numerical implementation of digital control systems.	[SU1] Assessment of task fulfilment

Subject contents	LECTURE Analog, discrete and digital control systems. Sampling, quantization and coding. Structures of discrete control systems. Discrete signals in digital control systems. Numerical approximation of differential equations. Z transform. Frequency characteristics of discrete systems. Filtering and smoothing of signals. Sampling frequency. Discrete realization of analog controllers. Methods of transforming the mathematical description of analog controllers to the mathematical description of discrete controllers depending on the sampling frequency. Analog to digital and digital to analog conversion. Investigation of the stability of discrete control systems. The influence of sampling frequency on the methods of designing discrete control systems. Methods of designing discrete systems based on a given position of the roots of the characteristic equation on the z plane. State feedback controllers designing on the basis of pole placement.LABORATORY Solving differential equations. Converting differential equations to difference and recursive equations. Solving difference and recursive equations. The Z transform and its application to solving recursive equations. Preparation of frequency characteristics of discrete systems. Converting the transfer function of an analog controller to the corresponding transfer function of a discrete controller. Designing discrete control systems depending on the sampling frequency.
Prerequisites and co-requisites	Fundamentals of the control theory. Mathematics including linear algebra, matrix algebra, differential and integral calculus, linear differential equations.

Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Midterm colloquium	55.0%	40.0%
	Written exam	55.0%	60.0%
