| Subject objectives                             | To know physical quantities and phenomena, to describe, analyse and understand more complex physical problems with the use of advanced mathematics   |                      |  |  |        |   |         |     |  |
| Learning outcomes                              | Course outcome   |                      | Subject outcome  |  |        | Method of verification                                |         |     |  |
|  | к6_U03   |                      | Student solves simple<br>technological problems using laws<br>of physics           |  |        | [SU2] Assessment of ability to<br>analyse information |         |     |  |
|  | K6_W02   |                      | Student solves simple<br>technological problems using laws<br>of physics           |  |        | [SW1] Assessment of factual knowledge                 |         |     |  |
|  | K6_U01   |                      | Student adopts the knowledge<br>required for the analysis of<br>physical phenomena |  |        | [SU4] Assessment of ability to use methods and tools  |         |     |  |
| Subject contents                               | LECTURE: Introduction: International system of units. Standards of units. Description of motion. Newton's law. Work, energy, power. Conservation of energy. Centre of mass, linear momentum of a system, conservation of linear momentum – examples. Angular motion of a rigid body, moment-of- the-force, angular momentum, conservation of angular momentum Simple harmonic motion, damped harmonic motion. Forced vibration. Resonance. Mechanical waves. Harmonic waves. Interference of waves. Standing wave. Doppler's effect. Special theory of relativity. Galilean transformation, relativity effects. Lorentz transformation. Electric field. Electric field strength. Coulomb's law. Electric dipole. Gauss's law. Potential of electric field. Potential of a charge system. Potential of a conductor. Electrical capacitance. Electric current: current strength, Ohm's law, Kirchhoff's law, power of electric current Magnetic field: Lorentz's force, charge and conductor with current into magnetic field. Ampere's law. Two parallel conductors with currents. Biot-Savart's law. Conductors and dielectrics, dia-, para- and ferromagnetic materials, phenomenon of electromagnetic induction Geometrical optics: reflection and refraction of light, mirrors, lens, optical fibers. EXERCISE: Solving problems illustrating Newton's laws, translational and rotational motions of bodies. Solving problems applying conservation energy, momentum and angular momentum. Solving problems of simple harmonic motion and velocity of particle of medium during propagation waves. Calculation of dilatation of time and contraction of length using Lorentz's transformation. Solving problems illustrating dependence of mass, momentum and energy of bodies on the velocity. Calculation of charged particles in electrostatic field, determination of magnetic induction of trajectory motion of charged particles in electric and magnetic field, determination of magnetic induction of trajectory motion of charged particles in electric and magnetic field, determination of magnetic induction us |                      |  |  |        |   |         |     |  |

| Prerequisites<br>and co-requisites                             | High school level physics knowledge   |   |                               |  |  |  |
|--|---|---|-------------------------------|--|--|--|
| Assessment methods<br>and criteria                             | Subject passing criteria  | Passing threshold   | Percentage of the final grade |  |  |  |
|  | Final exam - theory and problems  | 50.0%   | 60.0%                         |  |  |  |
|  | Final test - solving problems   | 50.0%   | 40.0%                         |  |  |  |
