

Subject card

Subject name and code	Automation and robotics, PG_00050291							
Field of study	Mechanical Engineering, Mechanical Engineering							
Date of commencement of studies	October 2020		Academic year of realisation of subject			2022/2023		
Education level	first-cycle studies		Subject group			field o	Obligatory subject group in the field of study	
						Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery			at the university		
Year of study	3		Language of instruction			Polish		
Semester of study	5		ECTS credits			5.0		
Learning profile	general academic profile		Assessment form			exam		
Conducting unit	Institute of Mechanic	Design -> Faculty of Mechanical Engineering and Ship Technology						
Name and surname	Subject supervisor	dr inż. Michał Mazur						
of lecturer (lecturers)	Teachers		mgr inż. Grzegorz Banaszek dr inż. Michał Mazur					
Lesson types and methods	Lesson type	Lecture	Tutorial	Laboratory	Projec	ect Seminar		SUM
of instruction	Number of study hours	30.0	15.0	15.0	0.0		0.0	60
	E-learning hours incli	uded: 0.0						
Learning activity and number of study hours	Learning activity	Participation in classes include plan		Participation i consultation h		Self-study		SUM
	Number of study hours	60		6.0		59.0		125
Subject objectives	Presentation of the fundamental issues related to automatic control systems, robots and manipulators. Knowing the structure and components of a typical control system. Gaining general information about the methods of designing, analysis and study of the properties of typical control systems. Acquisition of knowledge about the construction of typical, industrial robots and manipulators. Learning of methods for modeling, analysis and control of robots.							
Learning outcomes	Course out	come	Subject outcome			Method of verification		
	[K6_W06] possesses elementary knowledge on automatics and robotics of mechanical systems					[SW1] Assessment of factual knowledge		
	[K6_U03] is able to identify, formulate and develop the documentation of a simple design or technological task, including the description of the results of this task in Polish or in a foreign language and to present the results using computer software or other aiding tools					[SU4] Assessment of ability to use methods and tools		
Subject contents	Definition of basic terms. General structure of control system. Classification and examples of control system elements. Analog and digital control systems. Basic information about digital control systems. Boolean algebra. Combinational logic system. Sequential logic system. Design, synthesis and analysis of digital control systems. Basic information about analog control systems. A typical connections of components. Block diagrams and their transformations. Feedback. Description and classification of signals. Standard signals. Method of description control systems, elements and signals. Application of the Laplace transformation. Concept of transfer function. Static and dynamic characteristics of control systems. Time responses. Frequency characteristics. Nyquist and Bode plots. Controllers. Tuning of PID controller. Classification of robots and manipulators. Construction, modeling and analysis of robot motion. Introduction to robot control systems. The sensors used in industrial robots. Fundamentals of programming robots. Application of robots. Laboratory: Design of combinational and sequential logic circuits. Time and frequency characteristics of selected control system components. Modeling and simulation of control systems and robots. Mathematics, Physics, Mechanics							
Prerequisites and co-requisites	iwamernatics, Physics	s, iviechanics						

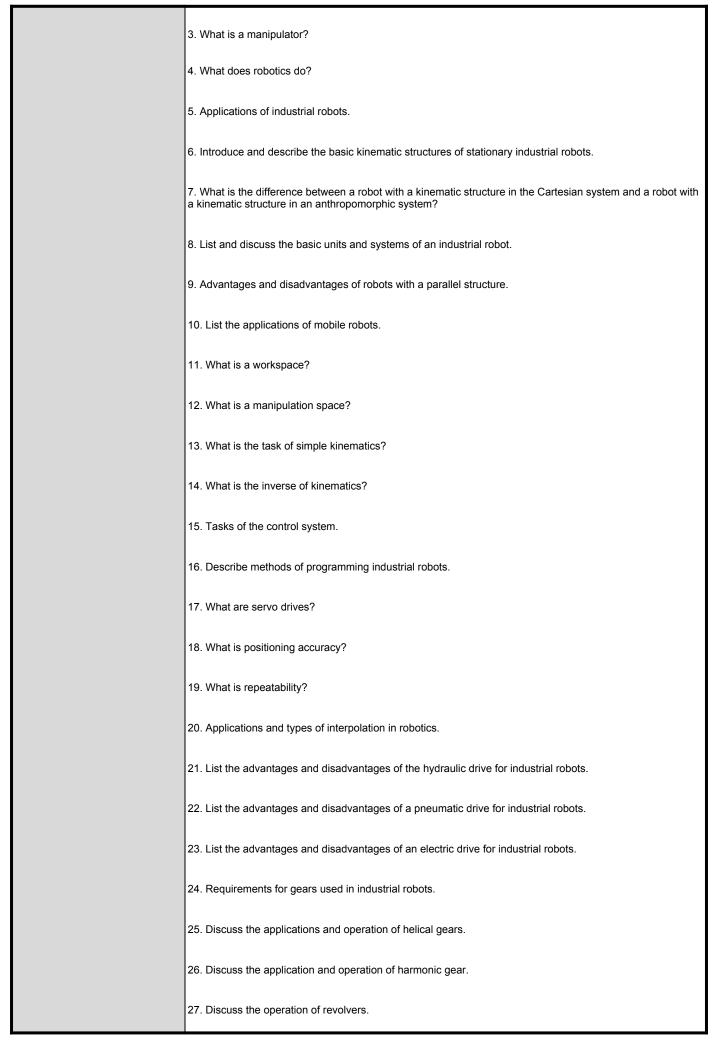

Data wydruku: 25.09.2023 21:43 Strona 1 z 5

Assessment methods	Subject passing criteria	Passing threshold	Percentage of the final grade		
and criteria	Laboratory (reports from laboratory exercises)	56.0%	30.0%		
	Written exam	56.0%	40.0%		
	Midterm colloquium	56.0%	30.0%

Example issues/ example questions/ tasks being completed	Automation				
	Describe the ACS scheme - Give an example				
	2. Spectral transmittance				
	3. What is the static characteristic of the term?				
	4. Approximation of the nonlinear static characteristic of the term in the vicinity of the operating point				
	5. The proportional term				
	6. 1st order inertial term				
	7. The integral term				
	8. The oscillating term				
	9. The ideal derivative term				
	10. Real derivative term				
	11. The delay term				
	12. Phase shift term				
	13. Stability of automation systems				
	14. Hurwitz criterion				
	15. Nyquist criterion				
	16. Static error				
	17. PID controller				
	18. Two-position regulation				
	19. Controllability				
	20. Observability				
	21. Optimum control with total quality criterion				
	Robotics				
	What is an industrial robot?				
	2. What is a mobile robot?				

Data wydruku: 25.09.2023 21:43 Strona 3 z 5

Data wydruku: 25.09.2023 21:43 Strona 4 z 5

	28. Discuss the operation of encoders.
	29. Describe the operation of ultrasonic proximity sensors.
	30. Applications of touch sensory systems.
Work placement	Not applicable
