

Subject card

Subject name and code	Technological Machines and Devices, PG_00039918								
Field of study	Mechanical Engineering, Mechanical Engineering								
Date of commencement of studies	October 2020		Academic year of realisation of subject			2022/2023			
Education level	first-cycle studies		Subject group			Optional subject group Subject group related to scientific research in the field of study			
Mode of study	Full-time studies		Mode of delivery			at the university			
Year of study	3		Language of instruction			Polish			
Semester of study	5		ECTS credits			3.0			
Learning profile	general academic profile		Assessment form			exam			
Conducting unit	Department of Manufacturing and Production Engineering -> Faculty of Mechanical Engineering and Ship Technology								
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Wojciech Blacharski						
	Teachers		dr inż. Wojciech Blacharski						
			dr hab. inż. Daniel Chuchała						
			prof. dr hab. inż. Kazimierz Orłowski						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Projec	t	Seminar	SUM	
	Number of study hours	30.0	0.0	15.0	0.0		0.0	45	
	E-learning hours included: 0.0								
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study		SUM	
	Number of study hours	45		6.0		24.0		75	
Subject objectives	The aim of the course is to familiarize students with the basics of construction and operation of technological machines, including in particular selected machine tools. The contents presented in the course concern the following issues: kinematics of technological machines, design solutions of basic mechanical assemblies, issues of static and dynamic rigidity of the machine tool, varieties of powertrains and their operational features, construction and operation of manual and automatic control systems of machines.								
Learning outcomes	Course outcome		Subject outcome			Method of verification			
	[K6_U08] is able to design a technological manufacturing process for typical elements of machines or devices, using analytical and numerical calculating tools		knowledge of computer aided applications in the issues of machine control, diagnostic tests			[SU2] Assessment of ability to analyse information [SU3] Assessment of ability to use knowledge gained from the subject			
	[K6_W08] possesses knowledge including methodology of designachine parts, mech devices, selection of materials, manufactu operation, with the life	The student has a basic knowledge of the construction and principles of designing machine tools and other technological machines, including kinematic systems, mechanical units, drive units and control systems.			[SW1] Assessment of factual knowledge				

Data wydruku: 20.04.2024 14:31 Strona 1 z 2

Subject contents	LECTURE:	LECTURE:						
	The spatial-motor system of a technological machine. Classification of movements in machine tools. Kinematics of machine drive assemblies: kinematic scheme, kinematic chains, graded drives, kinematic systems for implementing complex shaping movements, comparison of kinematic systems of selected traditional and CNC machine tools. Main drives - examples of solutions. Spindles of machine tools, spindle bearings, examples of solutions. Feed drives, mechanisms for converting rotary motion into linear motion. Guides - guide varieties, their characteristics, examples of applications. Couplings and brakes - tasks performed, varieties, examples of solutions. Bodies of technological machines - requirements, examples of construction. Mechanical components for the construction of modular machines, examples and advantages of modular machines. OUPN system of machine tools, deformations and vibrations, static and dynamic rigidity, thermal deformations, typical machining errors caused by vibrations and deformations in cutting machines. Technical-utility characteristics of technological machines: productivity, accuracy, rigidity, safety, ergonomics, durability, reliability. Analysis of the machine tool kinematic system: definitions, kinematic couplings, kinematic accuracy. Construction of selected CNC machine tools with serial and parallel structures. Translated with www.DeepL.com/Translator (free version) LABORATORY: Computer-aided selection of selected machine tool components. Experimental determination of technological bases on a CNC milling machine. Determination of tool length on CNC milling machine. Analysis of kinematic chains of a gear hobbing milling machine. Structural structure of numerically controlled technological machines. Power balance of technological machines. Modular technological machines							
Prerequisites and co-requisites								
Assessment methods	Subject passing criteria	Passing threshold	Percentage of the final grade					
and criteria	laboratory exercises	100.0%	20.0%					
	Final exam	50.0%	80.0%					
Recommended reading	Basic literature Supplementary literature	 Honczarenko J.: Obrabiarki sterowane numerycznie. WNT. Warszawa 2008. Wrotny L.T.: Obrabiarki skrawajace do metali. WNT. 1979.
