

Subject card

Subject name and code	Pumps, Compressors and Fans, PG_00039901								
Field of study	Mechanical Engineering, Mechanical Engineering								
•									
Date of commencement of studies	October 2020		Academic year of realisation of subject			2022/	2022/2023		
Education level	first-cycle studies		Subject group			Option	Optional subject group		
						Subject group related to scientific research in the field of study			
Mode of study	Full-time studies		Mode of delivery			at the university			
Year of study	3		Language of instruction			Polish			
Semester of study	6		ECTS credits			2.0			
Learning profile	general academic profile		Assessment form			assessment			
Conducting unit	Department of Energy and Industrial		Apparatus -> Faculty of Mechanical			Engineering and Ship Technology			
Name and surname	Subject supervisor		dr hab. inż. Marian Piwowarski						
of lecturer (lecturers)	Teachers		dr hab. inż. M	ski					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory Project		t	Seminar	SUM	
	Number of study hours	30.0	0.0	0.0	0.0		0.0	30	
	E-learning hours incl	uded: 0.0	1		1		1	·	
Learning activity and number of study hours	Learning activity	Participation in classes included		Participation in consultation hours		Self-study		SUM	
	Number of study hours	30		6.0		14.0		50	
Subject objectives	The aim of the course is to introduce students to the principles of turbomachinery flow, their construction and cooperation with the installation.								
Learning outcomes	Course outcome		Subject outcome			Method of verification			
	[K6_U07] is able to design a typical construction of a mechanical device, component or a testing station using appropriate methods and tools, adhering to the set usage criteria		The student has a basic knowledge of centrifugal pumps, compressors and fans.			[SU2] Assessment of ability to analyse information			
	[K6_W09] possesses basic knowledge within the range of thermodynamics and fluid mechanics, construction and operation of heat generating devices, process equipment, including renewable energy sources, cooling and air conditioning		The student is able to pre-design a typical pump or compressor.			[SW1] Assessment of factual knowledge			
Subject contents	Division and a brief overview of the various types of rotating machinery. Common features and differences in the design and operation of pumps, fans and compressors. Schematics and scope. Basic concepts and definitions in accordance with BS. Theoretical basis of all rotary machines. Accompanying movement of the rotor and the fluid flow channels. Methods of calculation and design of the rotor and the flow channels. Cooperation with rotating machinery installations, performance collaboration. Setpoint control methods, scope, advantages disadvantages, economy. Cavitation phenomenon and its impact on the operation and performance of centrifugal pumps. Fundamentals of fluid mechanics, the basis of construction machinery.								
Prerequisites and co-requisites	T directions of held the chance, the basis of construction machinery.

Assessment methods	Subject passing criteria	Passing threshold	Percentage of the final grade				
and criteria	qualifying exam	50.0%	100.0%				
Recommended reading	Basic literature	Karassik, Krutzsch, Fraser, Messina Pump Handbook					
		Hanlon P. C. Compressor handbook, McGraw-Hill Companies, Inc, NY, 2001					
		Bloch H., P. Pump Users Handbook Life Extension, CRC Press LLC, 2005					
		Nesbitt B. Handbook of Pumps and Pumping, Elsevier Science & Technology Books, 2006					
	Supplementary literature	Tyler G. Hicks "Pump selection and	d Application"				
		H. H. Anderson "Centrifugal Pumps"					
		Nelik L. Centrifugal and rotary pumps fundamentals with applications, CRC Press LLC, 2000					
		Boyce, M. P. Gas turbine engineering handbook, Oxford, UK, 2006					
	eResources addresses	Adresy na platformie eNauczanie:					
		Pompy, sprężarki i wentylatory - Moodle ID: 29721 https://enauczanie.pg.edu.pl/moodle/course/view.php?id=29721					
Example issues/ example questions/ tasks being completed	Please, based on the basic pump achieves the highest head?	equation, explain why among the cent	rifugal pumps, the centrifugal pump				
	To what extent are the axial and radial compressor stages designed for the speed characteristic?						
Work placement	Not applicable
