

Subject card

Subject name and code	Fundamentals of Machine Design II, PG_00050280						
Field of study	Mechanical Engineering, Mechanical Engineering						
Date of commencement of studies	October 2020		Academic year of realisation of subject		2021/2022		
Education level	first-cycle studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	2		Language of instruction		English None		
Semester of study	4		ECTS credits		8.0		
Learning profile	general academic profile		Assessment form		exam		
Conducting unit	Zakład Konstrukcji Maszyn i Inżynierii Medycznej -> Institute of Mechanics and Machine Design -> Faculty of Mechanical Engineering and Ship Technology						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Grzegorz Rotta				
	Teachers		dr inż. Grzegorz Rotta				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	30.0	0.0	30.0	0.0	90
	E-learning hours included: 0.0						
	Adresy na platformie eNauczenie: Fundamentals of Machine Design II - Moodle ID: 22941 https://enauczanie.pg.edu.pl/moodle/course/view.php?id=22941						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	90		8.0		102.0	200
Subject objectives	<p>Presentation of the general theoretical foundations (features, functions, constructional variants, application, etc.) regarding typical groups of machine parts, such as: screw joints, welded joints, shafts and axles, couplings, gears, brakes, bearings, drives, flexible elements.</p> <p>Acquainted with the basic calculation methods of typical machine elements and how to select catalog parts for the designed technical device</p> <p>Learning to create technical documentation effectively using theoretical knowledge and CAD software</p>						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	K6_W04	Possesses knowledge on mechanics, including the processes of modelling mechanical systems, statics, kinematics and dynamics of rigid objects and basic knowledge on vibrations	[SW1] Assessment of factual knowledge
	K6_W08	Possesses basic knowledge including the methodology of designing machine parts, mechanical devices, selection of construction materials, manufacturing and operation, with the lifetime cycle	[SW1] Assessment of factual knowledge
	[K6_U03] is able to identify, formulate and develop the documentation of a simple design or technological task, including the description of the results of this task in Polish or in a foreign language and to present the results using computer software or other aiding tools	Is able to identify, formulate and develop the documentation of a simple design or technological task, including the description of the results of this task in Polish or in a foreign language and to present the results using computer software or other aiding tools	[SU1] Assessment of task fulfilment
	K6_U11	Is able to analyse the operation of devices and compare the construction solutions applying usage, safety, environmental, economic and legal criteria	[SU2] Assessment of ability to analyse information [SU4] Assessment of ability to use methods and tools
	K6_U07	Is able to design a typical construction of a mechanical device, component or a testing station using appropriate methods and tools, adhering to the set usage criteria	[SU1] Assessment of task fulfilment [SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools
Subject contents	<p>Presentation of the general theoretical foundations (features, functions, constructional variants, application, etc.) regarding typical groups of machine parts, such as: screw joints, welded joints, shafts and axles, couplings, gears, brakes, bearings, drives, flexible elements. Acquainted with the basic calculation methods of typical machine elements</p>		
Prerequisites and co-requisites	Basic knowledge of mechanics, strength of materials, technical drawing, materials science and any CAD program		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Tests	56.0%	30.0%
	Final exam	56.0%	40.0%
	Design projects	56.0%	30.0%
Recommended reading	Basic literature	A set of scripts from the Basics of Machine Design published by the Gdańsk University of Technology	
	Supplementary literature	<p>- A set of books "Basics of Machine Design" published by PWN, Warsaw</p> <p>- "PKM, t. I, II, III" edited by M. Dietrich, PWN, Warsaw</p> <p>- Any works on the "Basics of Machine Design" in Polish and English</p>	
	eResources addresses	<p>Fundamentals of Machine Design II - Moodle ID: 22941</p> <p>https://enauczanie.pg.edu.pl/moodle/course/view.php?id=22941</p>	

Example issues/ example questions/ tasks being completed	<p>- determining the element strength at a given load (general technical constructions, bolted joints, welded joints, shafts and axles)- determining the minimum dimensions of an element for specific operating conditions (general technical constructions, screw joints, welded joints, shafts and axles)- determining the maximum load of an element for given dimensions (general technical constructions, bolted joints, welded joints, shafts and axles)- determining the durability of parts, e.g. rolling bearings- selection of components for the designed simple machine (fasteners, bearings, other catalog elements) or mechanical devices (drives, e.g. motors, clutches, gears, bearings and others)</p>
Work placement	Not applicable
