

Subject card

Subject name and code	Water supply systems I, PG_00043646						
Field of study	Environmental Engineering						
Date of commencement of studies	October 2020			Academic year of realisation of subject		2022/2023	
Education level	first-cycle studies			Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study	
Mode of study	Full-time studies			Mode of delivery		at the university	
Year of study	3			Language of instruction		Polish	
Semester of study	5			ECTS credits		3.0	
Learning profile	general academic profile			Assessment form		exam	
Conducting unit	Department of Sanitary Engineering -> Faculty of Civil and Environmental Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor			dr inż. Dominika Sobotka			
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	15.0	0.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		2.0		35.0	82
Subject objectives	General knowledge of the water supply system existence. Possibility of the water supply system general designing. Cooperation between elements of the water supply system.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K6_W09] has ordered, theoretically founded knowledge in the field of water supply, sewage, heating, ventilation and air conditioning, and the principles of shaping the microclimate of rooms; knows legal regulations, standardization issues and recommendations for the design of water supply, sewage, heating and gas networks and installations	Student has an orderly, theoretically founded knowledge of water supply systems, knows standardization and legal issues.	[SW1] Assessment of factual knowledge
	[K6_U03] can prepare documentation regarding the implementation of an engineering task/project and prepare a text or presentation including a discussion of the results of the implementation	Student can prepare technical specification on the realization of the project on the water supplying systems.	[SU1] Assessment of task fulfilment [SU4] Assessment of ability to use methods and tools
	[K6_K02] understands the need to formulate and communicate to the public information and opinions on the achievements of environmental engineering and other aspects of the sanitary industry engineer's activity; is aware of the importance and understands the non-technical aspects and effects of engineering activities; makes efforts to provide such information and opinions in a widely understandable way, presenting different points of view	Student understands the need to inform the public and the effects of engineering activities in the field of water systems.	[SK5] Assessment of ability to solve problems that arise in practice
	[K6_U11] can use selected computer programs to support design, including CAD graphics programs	Student is able to use selected computer programs in the field of water supply systems.	[SU1] Assessment of task fulfilment
	[K6_U12] can design installations, networks and facilities: water supply, sewage, heating and gas	Student knows how to design a water system.	[SU1] Assessment of task fulfilment
	[K6_U13] knows the rules of application and can choose the materials of the sanitary industry	Student knows the rules of application and is able to select materials for the water industry	[SU1] Assessment of task fulfilment [SU3] Assessment of ability to use knowledge gained from the subject
	[K6_W07] has a structured and theoretically founded knowledge in the field of materials used in the sanitary industry, their physico-chemical properties; knows and understands the basic processes of their production	Student has an orderly and theoretically founded knowledge of materials used in water supply systems.	[SW1] Assessment of factual knowledge
Subject contents	Water supply systems - general definitions, concepts. Cooperation between the elements of water-supply systems. Forecast water consumption for the period perspective as a basis for quantitative design of the water supply system. Footage Water supply - surface water and groundwater.		
Prerequisites and co-requisites	basic knowledge of hydraulic, geology, pipe materials and mechanic of ground		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Exercise - participation in class, performance computing tasks	80.0%	80.0%
	Lectures - participation in class, test.	60.0%	20.0%
