

## Subject card

Subject name and code	Power Engineering Electronics, PG_00038401						
Field of study	Electrical Engineering						
Date of commencement of studies	October 2020		Academic year of realisation of subject		2021/2022		
Education level	first-cycle studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Part-time studies		Mode of delivery		at the university		
Year of study	2		Language of instruction		Polish		
Semester of study	4		ECTS credits		4.0		
Learning profile	general academic profile		Assessment form		exam		
Conducting unit	Department of Power Electronics and Electrical Machines -> Faculty of Electrical and Control Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Krzysztof Iwan				
	Teachers		dr inż. Krzysztof Iwan				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	10.0	0.0	10.0	0.0	0.0	20
	E-learning hours included: 0.0						
	Adresy na platformie eNauczanie: ENERGOELEKTRONIKA [Niestacjonarne][2021/22] - Moodle ID: 21124 <a href="https://enauczanie.pg.edu.pl/moodle/course/view.php?id=21124">https://enauczanie.pg.edu.pl/moodle/course/view.php?id=21124</a>						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	20		8.0		72.0	100
Subject objectives	To learn analysis and understand principles of operation of basic power electronic elements and circuits.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	K6_U01		The student is able to use datasheets of power electronic components and knows the meaning of basic parameters. He can use available simulation programs.		[SU4] Assessment of ability to use methods and tools		
	K6_K01		Student is able to perform tasks and conducts laboratory tests as a part of team work.		[SK1] Assessment of group work skills		
	K6_W03		Student is able to explain and analyze operation of basic power electronic systems.		[SW3] Assessment of knowledge contained in written work and projects		
	K6_W10		Student knows operation principles of devices and power electronic converters. He is able to specify the requirements that the power electronic system should meet in terms of disturbances and effective methods of their reduction.		[SW1] Assessment of factual knowledge		
	K6_U08		Student is able to define functions of the power electronic system and is able to design a simple converter system.		[SU1] Assessment of task fulfilment		

Subject contents	LECTURE 1. The Significance of power electronics in the modern electricity. 2. Power electronic switches- review, structure, static and dynamic parameters, thermal model. 3. Modern semiconductor materials. 4. Diode rectifiers. 5. Thyristor controlled rectifiers. 6. Cycloconvertors. 7. Alternating Current controller. 8. DC-DC switch mode converters. 9. Theory of modulation applied for power converters. 10. Transistor inverters. 11. Resonant converters. 12. Multi-level inverters and matrix converters. 13. PWM rectifiers. 14. Series and parallel active filters. 15. Overview of chosen power electronic problems: power network distortion, UPS systems, PFC systems. LABORATORY 1. Alternating Current controller. 2. Single-Phase diode rectifiers. 3. Transformerless DC-DC converters. 4. Single-Phase voltage inverter.		
Prerequisites and co-requisites	The Knowledge of theoretical rules and methods of analysis of electric circuits presented within the framework of lectures of "Electrical circuits". Knowledge of problems connected with semiconductor physics presented within the framework of lectures of "Electronic engineering".		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Examination	60.0%	60.0%
	Laboratory	60.0%	40.0%

Example issues/ example questions/ tasks being completed	<ol style="list-style-type: none"><li>1. Power diodes - basic structure, parameters, static and switching characteristics, types and features.</li><li>2. Thyristors - basic structure, parameters, static and switching characteristics, types and features.</li><li>3. Power MOSFET's - basic structure, parameters, static and switching characteristics.</li><li>4. Insulated Gate Bipolar Transistors basic structure, parameters, static and switching characteristics, types and features.</li><li>5. Real power, active power and apparent power in power electronic systems.</li><li>6. 1 pulse line frequency diode rectifire - currents and voltages waveforms with R, RL, RE, RLD, RC loads. Basic relationships.</li><li>7. p- pulses one direction line frequency diode rectifire - properites, waveforms, basic relationships.</li><li>8. Single Phase bridge diode rectifire with R,RC,RL, RLE loads - basic concept, currents and voltages waveforms, basic relationships.</li><li>9. Three- Phase bridge diode rectifire with R load - basic concept, currents and voltages waveforms, basic relationships.</li><li>10. Thyristor controlled one - pulse rectifiers with RL, R and RE loads - principle of operation, currents and voltages waveforms, basic relationships.</li><li>11. Thyristor controlled two - pulse rectifiers with RL and R loads - principle of operation, currents and voltages waveforms, basic relationships.</li><li>12. Operation modes of the thyristor controlled rectifire with RLE load.</li><li>13. Thyristor controlled three - pulse rectifiers with R load - principle of operation, currents and voltages waveforms, basic relationships.</li><li>14. Alternating current controller with R and RL loads - principle of operation, currents and voltages waveforms, basic relationships.</li><li>15. DC-DC switch mode converters - boost and buck converters - basic concept, principle of operation, basic relationships, currents and voltages waveforms, modes of operation, basic characteristics.</li><li>16. Thyristor reversible converters - structure, principle of operation, practical applications.</li><li>17. Cycloconvertors - structure, principle of operation and strategy of control.</li><li>18. A single - phase bridge voltage inverter - structure, principle of operation, methods of control of the first harmonic of the output voltage.</li><li>19. PWM and PDM modulation.</li><li>20. A three - phase bridge voltage inverter.</li><li>21. A space vectror modulation - SVPWM.</li><li>22. Current inverters - structure, basic properties and features.</li><li>23. Resonant converters - pricniple of operation, basic features.</li><li>24. Matrix inverters - pricniple of operation, basic features.</li><li>25. Multi-levels inverters - pricniple of operation, basic features.</li><li>26. Controlled PWM rectifires - structure, principle of operation, basic features.</li><li>27. Grid distortions and active filtres - structures, types, principle of operation.</li><li>28. Multi pulses diode rectifires ATRU - structures, features.</li><li>29. PFC converters - practical applications, structures, basic features.</li><li>30. UPS converters - practical applications, structures, basic features.</li></ol>		

Work placement	Not applicable
