

Subject card

Subject name and code	Electric and Thermal-Electric Power Plants, PG_00042178						
Field of study	Power Engineering, Power Engineering, Power Engineering, Power Engineering, Power Engineering						
Date of commencement of studies	October 2020		Academic year of realisation of subject		2022/2023		
Education level	first-cycle studies		Subject group		Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	3		Language of instruction		Polish		
Semester of study	6		ECTS credits		3.0		
Learning profile	general academic profile		Assessment form		exam		
Conducting unit	Department of Electrical Power Engineering -> Faculty of Electrical and Control Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Tomasz Minkiewicz				
	Teachers		dr inż. Tomasz Minkiewicz				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	15.0	15.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		5.0		25.0	75
Subject objectives	The purpose of this course is to familiarize students with general characteristics of the Polish Power System energy sources with particular emphasis on the role of CHP plants. Students become familiar with basic equipment and technological systems on example of CHP plant "Elektrociepłownia Gdanska".						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	K6_U04		The student is able to design a simplified diagram of the thermal system of a power plant and a combined heat and power plant.		[SU1] Assessment of task fulfilment		
	K6_U05		Student is able to perform balance calculations of mass and energy streams in a regenerative exchanger used in power plants and combined heat and power plants.		[SU1] Assessment of task fulfilment		
	K6_W08		The student knows and is able to discuss the construction, operating principle and functions of power plants and combined heat and power plants.		[SW1] Assessment of factual knowledge		
	K6_W05		The student knows the basic elements of electrical systems used in power plants and combined heat and power plants.		[SW1] Assessment of factual knowledge		

Subject contents	Lecture: current operation data of the Polish Power System; electricity and heat generation processes; equipment of power units; impact of the power plant on the environment. Laboratory: characteristics of the consumption of fuels and energy carriers, characteristics of electricity and heat production in Poland, Thermal calculations of power units and calculations of heat networks using computer tools. Project: a preliminary design of a power source in district heating as a combined heat and power plant which contain heat units equipped with boilers and steam turbines as well as water boilers working as a peak-load source.		
Prerequisites and co-requisites	Good knowledge of elements of physics (basic laws, physical quantities and their units and measures, mechanics, electrical engineering, thermodynamics, heat transfer). Knowledge of electrical energy generation technologies: energy conversions, efficiency of single conversion, efficiency of conversion cycle and thermodynamic cycle efficiency. Basic knowledge of mathematics: algebra, geometry, trigonometry, differential and integral calculus.		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Exam	60.0%	50.0%
	Laboratory reports	60.0%	15.0%
	Project work	60.0%	35.0%
