

## Subject card

|   |   |  |  |            |  |         |     |
|---|---|--|--|------------|--|---------|-----|
| Subject name and code                       | Physics 1, PG_00042018  |  |  |            |  |         |     |
| Field of study                              | Power Engineering, Power Engineering, Power Engineering, Power Engineering, Power Engineering   |  |  |            |  |         |     |
| Date of commencement of studies             | October 2020  | Academic year of realisation of subject  |  |            | 2020/2021  |         |     |
| Education level                             | first-cycle studies   | Subject group  |  |            | Obligatory subject group in the field of study   |         |     |
| Mode of study                               | Full-time studies   | Mode of delivery   |  |            | at the university  |         |     |
| Year of study                               | 1   | Language of instruction  |  |            | English  |         |     |
| Semester of study                           | 2   | ECTS credits   |  |            | 2.0  |         |     |
| Learning profile                            | general academic profile  | Assessment form  |  |            | exam   |         |     |
| Conducting unit                             | Department of Control and Power Engineering -> Faculty of Ocean Engineering and Ship Technology   |  |  |            |  |         |     |
| Name and surname of lecturer (lecturers)    | Subject supervisor  |  | dr hab. inż. Małgorzata Śmiałek-Telega |            |  |         |     |
|   | Teachers  |  | dr hab. inż. Małgorzata Śmiałek-Telega |            |  |         |     |
| Lesson types and methods of instruction     | Lesson type   | Lecture  | Tutorial                               | Laboratory | Project  | Seminar | SUM |
|   | Number of study hours   | 30.0   | 0.0                                    | 0.0        | 0.0  | 0.0     | 30  |
|   | E-learning hours included: 0.0  |  |  |            |  |         |     |
|   | Adresy na platformie eNauczenie:<br>PHYSICS I - Moodle ID: 11543<br><a href="https://enauczenie.pg.edu.pl/moodle/course/view.php?id=11543">https://enauczenie.pg.edu.pl/moodle/course/view.php?id=11543</a>   |  |  |            |  |         |     |
| Learning activity and number of study hours | Learning activity   | Participation in didactic classes included in study plan   | Participation in consultation hours    |            | Self-study   | SUM     |     |
|   | Number of study hours   | 30   | 5.0                                    |            | 15.0   | 50      |     |
| Subject objectives                          | Acquisition of basic knowledge in selected branches of physics, both classical and modern. Acquiring the skills of qualitative understanding of selected principles and laws of classical physics and modern and quantitative analysis of selected phenomena in this area Understanding the basic techniques and methods of measurement of selected physical Developing social skills, such as emotional intelligence (the ability to work in a group of students), with a view to effective problem solving and tasks, sense of responsibility, honesty and integrity in academia and society. |  |  |            |  |         |     |
| Learning outcomes                           | Course outcome  | Subject outcome  |  |            | Method of verification   |         |     |
|   | K6_K01  | The student is aware of the need for further education and self-improvement in the field of energy industry and the possibilities of further education   |  |            | [SK5] Assessment of ability to solve problems that arise in practice<br>[SK4] Assessment of communication skills, including language correctness |         |     |
|   | K6_W02  | The student explains the basic knowledge in the field of physics, chemistry, technical thermodynamics and fluid mechanics, necessary to understand and describe the basic phenomena occurring in energy devices and systems and in their environment, the power industry and opportunities for further education |  |            | [SW1] Assessment of factual knowledge  |         |     |

|                                 |   |
|---------------------------------|---|
| Subject contents                | <p>Introduction: Physical quantities , vectors , the international system of units (SI) , mass , time and length, an overview of the sizes found in nature .</p> <p>Principles of dynamics : fundamental interactions, the first law of dynamics, the second law of dynamics equations of motion trajectory , the third law of dynamics, friction. The definition of work for constant and variable force, the assertion of labor and energy , the definition of power , conservative forces .</p> <p>The principle of conservation of energy : energy potential , the potential energy of gravity , the law of conservation of mechanical energy , the principle of conservation of energy . The principle of conservation of momentum : the center of mass , the momentum of the bodies , the principle of conservation of momentum , rocket motion , collision of bodies.</p> <p>The principle of conservation of angular momentum : rotation, moment of inertia , kinetic energy in a rotating motion . Moment of force , the definition of angular momentum , the relationship between the torque value and angular momentum , angular momentum of a rigid body , the principle of conservation of angular momentum .</p> <p>The special theory of relativity : Galilean transformation , Michelson -Morley experiment , Einstein's principle of relativity , simultaneity of events , the relativity of time, time dilation , twin paradox , length contraction , Lorentz transformation , the transformation speed , relativistic momentum and energy.</p> <p>Simple harmonic motion : swing , velocity, acceleration , force and energy of the harmonic motion . Pendulum , physical pendulum , damped harmonic motion , forced vibration , mechanical resonance .</p> <p>Mechanical waves : transverse and longitudinal waves , reflection of waves , harmonic waves , sound waves , the intensity of the wave. Interference of harmonic waves , strengthening and decay of waves, standing waves , vibrations, strings , Doppler effect.</p> <p>Electric field : electric charges , the definition of the electric field , the electric dipole field , the movement of charge in an electric field , an electric dipole <math>p</math> , <math>p</math> electrical flow , Gauss's law , examples.</p> <p>Electric potential : the definition of potential difference , the relationship between potential difference and the intensity of the electric field . The potential field of a point charge , and the freight , energy impact loads , the potential guide, the charge density on the surface of the conductor , van de Graaff generator .</p> <p>Electrical capacity : definition of capacity, flat capacitor , the capacitor dielectric , dielectric polarization , the energy of the electric field . Electric current : the current and current density , electrical resistance , Ohm's law , resistivity , superconductivity , work and power current law, Kirchhoff</p> <p>Magnetic field: the Lorentz force , the definition of the vector magnetic induction , current-carrying conductor in a magnetic field , the frame of the current in a magnetic field , magnetic dipole moment , the movement of charge in a magnetic field , cyclotron frequency , cyclotron mass spectrometer , Ampere's law , magnetic field straight conductor and a solenoid , two conductors in parallel with the current, Biot- Savart law , circular guide with the current, the magnetic moment of the electron in an atom . Magnetic properties of matter : paramagnetics , right Curie diamagnets , ferromagnets , magnetic hysteresis .</p> <p>Electromagnetic induction : Magnetic flux , Faraday's law of induction , Lenz's law , AC generator , the induced electric field , eddy currents , the phenomenon of self-induction , inductance of the solenoid , magnetic energy .</p> <p>The gravitational field : the experience of Galileo's law of universal gravitation , the measurement of the gravitational constant , the intensity and the potential of the gravitational field , gravity and weightlessness , tidal , Kepler's laws , satellite motion , and second cosmic velocity , elements of the general theory of relativity.</p> <p>Hydrostatics : properties of liquids, Pascal's law , hydrostatic pressure , Archimedes' principle , swimming bodies.</p> <p>Hydrodynamics : characteristics of fluid motion , Bernoulli's law , law Toricellego , viscosity, flow of non-viscous liquid and viscous , laminar and turbulent flow , Reynolds number , the resistance of the medium.</p> |
| Prerequisites and co-requisites |   |

| Assessment methods and criteria                                | Subject passing criteria   | Passing threshold  | Percentage of the final grade |
|--|--|--|-------------------------------|
|  |  | Written test (open questions)  | 50.0%                         |
| Recommended reading  | Basic literature   | <a href="#">David Halliday</a> , <a href="#">Robert Resnick</a> , <a href="#">Jearl Walker</a> <i>Fundamentals of Physics, Wiley, any edition</i>  |                               |
