

Subject card

Subject name and code	Measurements and Measurement Systems, PG_00042054						
Field of study	Power Engineering, Power Engineering, Power Engineering, Power Engineering, Power Engineering						
Date of commencement of studies	October 2020		Academic year of realisation of subject		2021/2022		
Education level	first-cycle studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	2		Language of instruction		English		
Semester of study	4		ECTS credits		5.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Department of Metrology and Information Systems -> Faculty of Electrical and Control Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Anna Golijanek-Jędrzejczyk				
	Teachers		dr inż. Ariel Dzwonkowski dr inż. Anna Golijanek-Jędrzejczyk				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	30.0	0.0	0.0	60
	E-learning hours included: 0.0						
	Adresy na platformie eNauczanie:						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	60		10.0		55.0	125
Subject objectives	Familiarize students with issues related to metrology and measurement systems.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	K6_W08		The student correctly uses analogue and digital measuring instruments.		[SW2] Assessment of knowledge contained in presentation [SW3] Assessment of knowledge contained in written work and projects [SW1] Assessment of factual knowledge		
	K6_U03		Student configures measurement systems. The student designs measurement systems for measuring electrical and non-electrical quantities. Student presents the principle of operation of transducers.		[SU3] Assessment of ability to use knowledge gained from the subject [SU1] Assessment of task fulfilment [SU4] Assessment of ability to use methods and tools [SU5] Assessment of ability to present the results of task [SU2] Assessment of ability to analyse information		

Subject contents	<p>LECTURE: Basic concepts of measurement. Measurement methods. The theory of measurement errors and uncertainty. Converters. The structure of measuring instruments. Analog and digital measuring instruments. Ways of extending the measuring ranges. Measurement bridges. Measurements of basic electrical quantities (voltage and current, resistance, inductance, capacity, frequency, phase shift, power and energy in single and three-phase circuits). Measurements of non-electrical quantities by electrical methods. Analog-to-digital converters of mechanical quantities. Electrical temperature measurements. Stress measurement. Measurement and diagnostic systems. Measurement software. Interfaces in measurement systems. Measurement data transmission methods: wired and wireless. Vision and infrared measurement systems. Virtual measuring instruments. The use of virtual instruments in the measurement and design of basic measurement systems.</p> <p>LABORATORY: Calibration of measuring devices. Measurements using an oscilloscope. Measurements of RLC elements parameters. Measurements of frequency and rotational speed. Measurement of earth resistance and short circuit loop impedance. Power measurement in three-phase circuits. Temperature measurement. Computer measuring systems.</p>		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Homework and presentations - lecture.	60.0%	30.0%
	28 / 5000 Wyniki tłumaczenia Written test - lecture.	60.0%	20.0%
	Entry tests nad reports- lab.	60.0%	50.0%

	eResources addresses		
Example issues/ example questions/ tasks being completed	1. Causes of errors: systematic, random and coarse. Ways to reduce these errors. 2 How to estimate the measurement uncertainty as type A and type B? 3. Derive the diagram and the method of balancing the Wheatstone bridge. 4. Active and reactive power measurement systems in a three-phase, four-wire system. 5. Systems for measuring active and reactive power in a three-phase three-wire system.		
Work placement	Not applicable
