

Subject card

Subject name and code	Mathematics 1, PG_00041652						
Field of study	Transport and Logistics, Transport and Logistics						
Date of commencement of studies	October 2020	Academic year of realisation of subject			2020/2021		
Education level	first-cycle studies	Subject group			Obligatory subject group in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	1	ECTS credits			9.0		
Learning profile	general academic profile	Assessment form			exam		
Conducting unit	Mathematics Center -> Vice-Rector for Education						
Name and surname of lecturer (lecturers)	Subject supervisor		dr Katarzyna Paćzkowska				
	Teachers		dr Katarzyna Paćzkowska mgr Dorota Grott				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	45.0	60.0	0.0	0.0	0.0	105
	E-learning hours included: 0.0						
	WOiO - Transport i logistyka - Matematyka - 2020/21 (K.Paćzkowska) - Moodle ID: 5800 https://enauczanie.pg.edu.pl/moodle/course/view.php?id=5800 WOiO - Transport i logistyka - Liczby zespolone - 2020/21 (K.Paćzkowska) - Moodle ID: 11229 https://enauczanie.pg.edu.pl/moodle/course/view.php?id=11229						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours	Self-study	SUM	
	Number of study hours	105		10.0	110.0	225	
Subject objectives	Students obtain competence in the range of using methods of mathematical analysis and linear algebra and knowledge how to solve simple problems that can be found in the field of engineering.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K6_W01] has a basic knowledge in maths, including algebra, elements of logics, geometry, mathematical analysis, theory of probability necessary to describe and analyse the operation means and systems of transport	Student names basic properties of elementary functions. Student solves equations and inequalities with elementary functions. Student evaluates the limits of sequences. Student evaluates the limits of functions. Student gives a graphic interpretation of discontinuity points. Student uses the basic operations on complex numbers. Student defines the basic concepts of differential calculus of one variable function. Student uses the first and second derivatives of a function to analyze its properties. Student determines intervals of monotonicity of a given function and its extrema. Student applies the basic rules and techniques of integration to calculate indefinite integrals. Student lists geometrical applications of definite integrals. Student uses definite integral to solve geometrical problems. Student distinguishes between the types of improper integrals. Student explains the definition of the cross product. Student uses the triple scalar product to give the volume of solids.	[SW3] Assessment of knowledge contained in written work and projects [SW1] Assessment of factual knowledge
	[K6_U02] can work individually and in a team, communicate through various techniques in professional environment and also record, analyse, and present the results of work, can estimate the time needed to complete a given task	Student recognizes the importance of self-expanding knowledge and takes the challenge of working with a group to solve a problem. Student understands the need of lifelong learning. Student is able to inspire others and organize their learning process. Student is able to process the acquired information, analyze and interpret it, draw conclusions and reason opinions. Student recognizes the importance of skillful use of basic mathematical apparatus in terms of study in the future.	[SU3] Assessment of ability to use knowledge gained from the subject [SU2] Assessment of ability to analyse information [SU1] Assessment of task fulfilment
Subject contents	The absolute value function – definition, solving equations and inequalities with absolute value. Functions of one variable and their properties: linear functions, quadratic functions, power functions, polynomials, rational functions, exponential functions, logarithmic functions, trigonometric functions, cyclometric functions – equations and inequalities. Operations on complex numbers, trigonometric form of a complex number, de Moivre's formula, roots of complex numbers. Limit of a sequence, convergent and divergent sequences, the number e. Limits and continuity of a function. Differential calculus of functions of one variable. Differentiation of elementary functions. Differentiation of composite functions. Derivatives of higher orders. Extrema of a function. Points of inflexion. Indeterminate forms and de l'Hospital's Rule. Integral calculus of functions of one variable. Formula for the integration by parts. Formula for the integration by substitution. Integration of rational, irrational and trigonometric functions. Definite integral. Newton- Leibniz formula. Geometric application of definite integrals. Improper integrals. Vectors in three- dimensional space. The dot product of vectors, the cross product, the scalar triple product of vectors, geometric interpretation.		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Written exam	50.0%	50.0%
	Midterm colloquium	30.0%	50.0%

Example issues/ example questions/ tasks being completed	<ol style="list-style-type: none"> 1. Solve the equation ... 2. Find the domain and range of the function $f(x)=\dots$. 3. Evaluate the limit of the given sequence (a_n). 4. Evaluate the limit of the given function $f(x)=\dots$ at the point $x_0= \dots$. 5. Analyse the continuity of the following function $f(x)=\dots$. 6. Using the rules of differentiation find the derivative of the following function $f(x)=\dots$. 7. Find local extremes and intervals of monotonicity of the function $f(x)=\dots$. 8. Determine indefinite integrals of the following functions using the method of integration by parts or the method of substitution... . 9. Give three applications of the definite integral with appropriate formulas. 10. Find the area of the region bounded by $y=\dots$, $y=\dots$, $x=\dots$ and $x=\dots$.
