

Subject card

Subject name and code	Industrial Microbiology, PG_00037405						
Field of study	Biotechnology						
Date of commencement of studies	October 2020	Academic year of realisation of subject			2021/2022		
Education level	first-cycle studies	Subject group			Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	2	Language of instruction			Polish		
Semester of study	4	ECTS credits			4.0		
Learning profile	general academic profile	Assessment form			exam		
Conducting unit	Department of Microbiology -> Faculty of Chemistry						
Name and surname of lecturer (lecturers)	Subject supervisor	dr hab. inż. Hubert Cieśliński					
	Teachers	dr hab. inż. Hubert Cieśliński dr inż. Paweł Filipkowski dr inż. Katarzyna Kozłowska-Tylingo					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	30.0	0.0	0.0	60
	E-learning hours included: 0.0						
Mikrobiologia Przemysłowa -rok 2021_22 - Moodle ID: 19721 https://enauczanie.pg.edu.pl/moodle/course/view.php?id=19721 Mikrobiologia Przemysłowa Laboratorium - 2021_22 - Moodle ID: 19722 https://enauczanie.pg.edu.pl/moodle/course/view.php?id=19722							
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM		
	Number of study hours	60	4.0	36.0	100		
Subject objectives	The aim of the course is to familiarize students with the use of microorganisms, animal cells, and enzymes produced by them for the production of consumer goods. In addition, the student learns the principles of the work safety with microorganisms in the industry. Recognize the methods improve production characteristics of microorganisms performed on the needs of industry and also learns the method of improving production traits of microorganisms performed on the needs of industry.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	K6_K02	The student can find and use sources of knowledge and technology in the field of industrial microbiology.	[SK5] Assessment of ability to solve problems that arise in practice
	K6_K05	The student understands the essence of the biotechnology's work The student understands the impact of biotechnology on people's lives and the state of the environment	[SK5] Assessment of ability to solve problems that arise in practice
	K6_U04	Student is able to perform properly cultures, conduct cultures of microorganisms (including in the bioreactor). The student has a basic knowledge of running microbiological collections. The student has basic knowledge and can carry out induced mutagenesis of microorganisms. Student is able to isolate microorganisms with selected properties from environmental samples.	[SU4] Assessment of ability to use methods and tools [SU2] Assessment of ability to analyse information [SU1] Assessment of task fulfilment
K6_W04	The student has a basic knowledge of industrial microbiology	[SW1] Assessment of factual knowledge	
Subject contents	<p>Lecture</p> <p>Isolation microorganisms for industrial applications from environmental samples. Microorganisms for industrial applications - methods used to improve the industrial properties of microorganisms. The storage of pure cultures for industrial applications. Cultivation conditions in industrial processes and the impact on the yield of obtained bioproducts. Presentation of selected biotechnologies: production of antibiotics (e.g. production of penicillin G and V), production of amino - acids (e.g. production of lysine), production of organic acids (e.g. production of citric acid). Production of enzymes for industrial purposes. Immobilization of enzymes – advantages and disadvantages. Bioaccumulation processes in the industrial production of copper.</p>		
Prerequisites and co-requisites	<p>Lecture</p> <p>The student has to finish the subject General Microbiology (lecture and laboratory exercises).</p>		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Tests during the term	60.0%	40.0%
	Writing exam	60.0%	60.0%
Recommended reading	Basic literature	<p>Lecture</p> <p>Zdzisława Libudzisz, Krystyna Kowal, Zofia Żakowska „Mikrobiologia techniczna tom 1, Mikroorganizmy i środowiska ich występowania” PWN, Warszawa, 2007.</p> <p>Zdzisława Libudzisz, Krystyna Kowal, Zofia Żakowska „Mikrobiologia techniczna tom 2, Mikroorganizmy w biotechnologii, ochronie środowiska i produkcji żywności” PWN, Warszawa, 2008.</p> <p>Hubert Cieśliński, Paweł Filipkowski, Józef Kur, Anna Lass, Marta Wanarska „Podstawy Mikrobiologii Przemysłowej” Wydawnictwo Politechniki Gdańskiej, Gdańsk, 2007.</p>	

	Supplementary literature	Lecture Praca zbiorowa Redakcja naukowa: Włodzimierz Bednarski, Arnold Rejs „Biotechnologia Żywności”, WNT, Warszawa, 2015.
	eResources addresses	
Example issues/ example questions/ tasks being completed	<ol style="list-style-type: none"> 1. List and describe the stages of isolation of microorganisms with biotechnological potential from environmental samples. 2. List and describe methods for improving the production properties of industrial microorganisms. 3. Describe the use of continuous culture and stationary culture in the industry. 4. Describe the methods of transient regulation of microorganism metabolism used in the production of glutamic acid by <i>Corynebacterium glutamicum</i>. 5. Explain the concepts of substrate induction and catabolic repression and explain their practical significance on the example of biotechnological production of penicillin G. 	
Work placement	Not applicable
