GDAŃSK UNIVERSITY OF TECHNOLOGY

Subject card

Subject name and code	Corrosion metallurgy, PG_00039724		
Field of study	Materials Engineering, Materials Engineering, Materials Engineering, Materials Engineering		
Date of commencement of studies	October 2020	Academic year of realisation of subject	2022/2023
Education level	first-cycle studies	Subject group	Optional subject group Subject group related to scientific research in the field of study
Mode of study	Full-time studies	Mode of delivery	at the university
Year of study	3	Language of instruction	Polish
Semester of study	6	ECTS credits	3.0
Learning profile	general academic profile	Assessment form	assessment
Conducting unit	Department of Electrochemistry, Corrosion and Materials Engineering -> Faculty of Chemistry		
Name and surname of lecturer (lecturers)	Subject supervisor	dr hab. inż. Michał Szociński	
	Teachers		

Lesson types and methods of instruction

Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
Number of study hours	15.0	0.0	30.0	0.0	0.0	45

E-learning hours included: 0.0

Learning activity and number of study hours

Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM
Number of study hours	45	5.0	25.0	75

Subject objectives

The aim of the subject is to familiarize students with: fundamental information concerning structure of metals and alloys, their properties with a special emphasis on susceptibility to corrosion, fundamental procedures connected with preparation of metallographic specimens and their evaluation.

Learning outcomes

Course outcome	Subject outcome	Method of verification
K6_U01	student can use the methods to describe basic metallographic properties of metals and alloys	[SU4] Assessment of ability to use methods and tools [SU1] Assessment of task fulfilment
K6_K01	student can plan the actions aimed at description of metallographic properties of materials	[SK3] Assessment of ability to organize work [SK5] Assessment of ability to solve problems that arise in practice
K6_W07	student has knowledge of structure and properties of fundamental construction materials	[SW3] Assessment of knowledge contained in written work and projects
K6_U02	student can evaluate fundamental physical properties of metals, utilize metallographic microscope and atomic force microscope to analyse microstructure of materials	[SU4] Assessment of ability to use methods and tools [SU1] Assessment of task fulfilment

Subject contents

Structure and properties of metals and alloys, general classification of metals and alloys, detailed structure of carbon steels, stainless steels, cast irons and non-ferrous alloys (copper and aluminum), preparation of metallographic specimens for microscopic analysis, preparation of samples for standard corrosion tests, procedure of macro- and microexamination of metallographic specimens, metallographic examination of corrosion damages of metals and alloys.

Prerequisites and co-requisites

Fundamentals of physics and physical chemistry.

Fundamentals of materials science.

Fundamentals of mechanics of materials.

Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Tests and reports from laboratory exercises	60.0%	50.0%
	Test from lectures	60.0%	50.0%

	eResources addresses	Adresy na platformie eNauczanie:	
Example issues/ example questions/ tasks being completed	1. Name and describe the examples of point and linear defects in crystalline lattice. 2. Describe the method of Vickers' hardness measurement. 3. Characterize the types of brass based on their composition. 4. Characterize the passive layer on aluminum. 5. What does intercrystalline corrosion consist in?		
Work placement	Not applicable
