	[K6_K02] is ready to solve problems related to the profession of geodesy and cartography engineer and to assess risks and effects of the performed activity		The student is able to analyze the risk associated with the use of unmanned aerial vehicles in geodetic measurements.		[SK5] Assessment of ability to solve problems that arise in practice [SK2] Assessment of progress of work		
	[K6_W13] has basic knowledge and understands concepts in the field of non-technical conditions of engineering activities as well as occupational safety and health regulations in the profession of geodesy engineer		The student possess the knowledge and is able to apply the principles of safe surveying with the use of unmanned aerial vehicles.		[SW1] Assessment of factual knowledge [SW3] Assessment of knowledge contained in written work and projects		
	[K6_W06] has a well-grounded knowledge and understands geodesy concepts including the main methods of obtaining data about space together with the surveying and computational methods, which from the one hand are compatible with the current legal status and from the other hand refer to measurements on the plane and cover the use of modern geodetic instruments, with taking into account the curvature of the Earth and the impact of gravity on the maner of measurements and results		Student possess the knowledge and uses the legal acts which regard carrying out the measurements through the use of unmanned aerial vehicles.		[SW1] Assessment of factual knowledge [SW3] Assessment of knowledge contained in written work and projects
