	[K6_U05] can formulate a simple engineering task and its specification within the range of design, construction and operation of means and systems of transport		The student defines the properties of materials. Student identifies the basic properties of metallic materials. Student identifies types of crystal structure research: macroscopic and microscopic. Student defines phase and structural components of Fe-C alloys.		[SU5] Assessment of ability to present the results of task [SU2] Assessment of ability to analyse information [SU1] Assessment of task fulfilment		
	[K6_W03] has a basic knowledge on hydromechanics, thermodynamics, machine construction, ecology, materials science and electronics necessary to understand the construction and operation principles of means of marine transport		The student analyzes the relationship between the receipt, structure, properties and functionality of the material.		[SW2] Assessment of knowledge contained in presentation [SW1] Assessment of factual knowledge
