

Subject card

Subject name and code	Strenght of Materials, PG_00051277						
Field of study	Transport and Logistics, Transport and Logistics						
Date of commencement of studies	October 2020	Academic year of realisation of subject			2021/2022		
Education level	first-cycle studies	Subject group					
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	2	Language of instruction			Polish		
Semester of study	3	ECTS credits			6.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Katedra Mechaniki Konstrukcji -> Faculty of Ocean Engineering and Ship Technology						
Name and surname of lecturer (lecturers)	Subject supervisor	dr hab. inż. Tomasz Mikulski					
	Teachers	dr inż. Maciej Kahsin mgr inż. Leszek Samson mgr inż. Paweł Bielski dr hab. inż. Tomasz Mikulski					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	45.0	30.0	15.0	0.0	0.0	90
	E-learning hours included: 0.0						
	Adresy na platformie eNauczanie: Wytrzymałość materiałów, W,C,L, TiL, sem.3, zimowy 21/22, (O:11350) - Moodle ID: 18377 https://enauczanie.pg.edu.pl/moodle/course/view.php?id=18377						
	Additional information: Lectures and exercises are conducted in the distance education system until further notice by the University Authorities.						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	90		12.0		48.0	150
Subject objectives	The aim of the course is to provide theoretical foundations of mechanics and strength regimes of one-dimensional structures (rods, beams). Student after the course should be able to: - determine the distributions of internal forces and moments - determine the stress distribution, - calculate the displacements of one-dimensional structures, - indicate the place of the greatest material effort at typical structure loads, - calculate the effort of material using a variety of strength material hypothesis.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K6_W02] has a basic knowledge in physics, including technical mechanics, fluid mechanics, solid-state physics, optics and acoustics necessary to understand basic physical phenomena occurring in transport	The student has acquired the skills to solve technical problems occurring in transport based on the laws of mechanics and basic material strength analysis.	[SW3] Assessment of knowledge contained in written work and projects [SW1] Assessment of factual knowledge
	[K6_U02] can work individually and in a team, communicate through various techniques in professional environment and also record, analyse, and present the results of work, can estimate the time needed to complete a given task	The student is able to perform strength analyzes of elements of structural systems and ship devices	[SU2] Assessment of ability to analyse information [SU3] Assessment of ability to use knowledge gained from the subject [SU1] Assessment of task fulfilment
Subject contents	<ol style="list-style-type: none">1. Basics assumptions and description of the Strength of Materials problems.2. State of stress and strain: general state of stress and strains, plane stress and plane strain states. Physical relationships between stresses and strains. Hooke's law.3. Axial tension and compression of the rod.4. The internal forces. Statically determinate structures: beams , trusses and frames. Cross-sectional axial forces, shear forces, bending moments, torsional moments.5. Moments of inertia of plane figures.6. Bending of beams.7. Torsion of monolithic and thin-walled bars.8. Eccentric tension (compression) of the bar.9. Shear stresses in bending problems.10. Bending line of beam. Euler's equation.11. Buckling of axially compressed rods.12. Strength hypotheses. Complex stress problems.		
Prerequisites and co-requisites	The student has passed the following subjects: - Technical Mechanic		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	exam	50.0%	30.0%
	laboratory	50.0%	20.0%
	exercise	50.0%	50.0%

	Supplementary literature	no data available	
	eResources addresses	Wytrzymałość materiałów, W,C,L, TiL, sem.3, zimowy 21/22, (O: 11350) - Moodle ID: 18377 https://enauczanie.pg.edu.pl/moodle/course/view.php?id=18377	
Example issues/ example questions/ tasks being completed	What differs plane state of stresses of the plane state of strains? What determines elongation of the axially tensioned rod? In which case there is a beam skew bending problem? Describe and review strength hypotheses. What determines the critical force of the compressed rod?		
Work placement	Not applicable
