GDAŃSK UNIVERSITY OF TECHNOLOGY

Subject card

Subject name and code	Strenght of Materials, PG_00051266		
Field of study	Ocean Engineering, Ocean Engineering		
Date of commencement of studies	October 2020	Academic year of realisation of subject	2021/2022
Education level	first-cycle studies	Subject group	
Mode of study	Full-time studies	Mode of delivery	at the university
Year of study	2	Language of instruction	Polish
Semester of study	3	ECTS credits	6.0
Learning profile	general academic profile	Assessment form	assessment
Conducting unit	Katedra Mechaniki Konstrukcji -> Faculty of Ocean Engineering and Ship Technology		
Name and surname of lecturer (lecturers)	Subject supervisor	dr hab. inż. Tomasz Mikulski	
	Teachers	mgr inż. Leszek Samson mgr inż. Paweł Bielski dr hab. inż. Tomasz Mikulski	

Lesson types and methods of instruction

Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
Number of study hours	45.0	30.0	15.0	0.0	0.0	90

E-learning hours included: 0.0

Adresy na platformie eNauczanie:
Wytrzymałość materiałów, W,C,L, Oceanotechnika , sem.3, zimowy 21/22, (O:097432) - Moodle ID: 18380
https://enauczanie.pg.edu.pl/moodle/course/view.php?id=18380

Additional information:
Lectures and exercises are conducted in the distance education system until further notice by the University Authorities.

Learning activity and number of study hours

Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM
Number of study hours	90	10.0	40.0	140

Subject objectives

The aim of the course is to provide theoretical foundations of mechanics and strength regimes of one-dimensional structures (rods, beams). Student after the course should be able to:

- determine the distributions of internal forces and moments
- determine the stress distribution,
- calculate the displacements of one-dimensional structures,
- indicate the place of the greatest material effort at typical structure loads,
- calculate the effort of material using a variety of strength material hypothesis.

Learning outcomes

Course outcome	Subject outcome	Method of verification
[K6_W02] has a basic knowledge in physics, including technical mechanics, fluid mechanics, solid-state physics, optics and acoustics necessary to understand basic physical phenomena occurring in ocean technology	The student has acquired the ability to solve technical problems based on the laws of mechanics and basic material strength analysis.	[SW3] Assessment of knowledge contained in written work and projects [SW1] Assessment of factual knowledge
[K6_U02] can work individually and in a team, communicate through various techniques in professional environment and also record, analyse, and present the results of work, can estimate the time needed to complete a given task	The student is able to perform strength analyzes of elements of structural systems and ship devices.	[SU4] Assessment of ability to use methods and tools [SU3] Assessment of ability to use knowledge gained from the subject [SU2] Assessment of ability to analyse information

Subject contents

1. Basics assumptions and description of the Strength of Materials problems.
2. State of stress and strain: general state of stress and strains, plane stress and plane strain states. Physical relationships between stresses and strains. Hooke's law.
3. Axial tension and compression of the rod.
4. The internal forces. Statically determinate structures: beams , trusses and frames. Cross-sectional axial forces, shear forces, bending moments, torsional moments.
5. Moments of inertia of plane figures.
6. Bending of beams.
7. Torsion of monolithic and thin-walled bars.
8. Eccentric tension (compression) of the bar.
9. Shear stresses in bending problems.
10. Bending line of beam. Euler's equation.
11. Buckling of axially compressed rods.
12. Strength hypothesises. Complex stress problems.

Prerequisites and co-requisites

The student has passed the following subjects:
- Technique Mechanic

Assessment methods and criteria

Subject passing criteria	Passing threshold	Percentage of the final grade
exercise	50.0%	50.0%
laboratory	50.0%	20.0%
exam	50.0%	30.0%

Supplementary literature	no data available
eResources addresses	Wytrzymałość materiałów, W,C,L, Oceanotechnika , sem.3, zimowy 21/22, (O:097432) - Moodle ID: 18380 https://enauczanie.pg.edu.pl/moodle/course/view.php?id=18380

Example issues/ example questions/ tasks being completed

What differs plane state of stresses of the plane state of strains?

What determines elongation of the axially tensioned rod?

In which case there is a beam skew bending problem?

Describe and review strength hypotheses.

What determines the critical force of the compressed rod?

Work placement
