

## Subject card

Subject name and code	Organization and control of air traffic , PG_00044651						
Field of study	Transport						
Date of commencement of studies	October 2020	Academic year of realisation of subject			2022/2023		
Education level	first-cycle studies	Subject group			Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	3	Language of instruction			Polish		
Semester of study	6	ECTS credits			3.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Department of Transportation Engineering -> Faculty of Civil and Environmental Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor	dr hab. inż. Jacek Oskarbski					
	Teachers	dr hab. inż. Jacek Oskarbski mgr inż. Artur Ryś					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	15.0	0.0	0.0	0.0	30
E-learning hours included: 0.0							
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study		SUM
	Number of study hours	30	5.0		40.0		75
Subject objectives	Acquire knowledge of flight control, aircraft operations in the airport area, airport operations, air traffic control.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	[K6_U12] able to select tools and methods, carry out assessments and simple tests of transport systems to an extent required of the specialty / learning profile	Students will be able to evaluate the functioning of an airport and make suggestions for improvements.					
	[K6_W17] has proficiency in transport systems as appropriate for their specialty	The student knows the means and methods of air traffic control, the principles of planning air traffic control systems and air pore handling. The student knows the fundamentals of air traffic engineering.					
Subject contents	Flight planning. Aircraft operations in the airport area. Airport operations. Air traffic control. Fundamentals of air traffic engineering.						
Prerequisites and co-requisites							
Assessment methods and criteria	Subject passing criteria	Passing threshold			Percentage of the final grade		
	Workshop part	90.0%			40.0%		
	Final test	50.0%			60.0%		
Recommended reading	Basic literature	Malarski M., Inżynieria ruchu lotniczego, OWPW 2006.					
	Supplementary literature	Journals: Transport Miejski i Regionalny, Przegląd Transportowy					
	eResources addresses	Adresy na platformie eNauczanie:					

<p>Example issues/ example questions/ tasks being completed</p>	<p>What factors are taken into account when choosing an airport location. Outline the division of airspace. List and describe handling operations at an airport - in one sentence each. Discuss the causes of aviation accidents and incidents. Present a proposal to improve aviation safety. Discuss the causes of aviation accidents and incidents, in one sentence each. Describe the different types of passenger terminals and their advantages and disadvantages. Give a classification of aviation incidents and give examples (theoretical) of each type listed events. Describe the structure, tasks, responsibilities of Airport Control, Area Control and Approach Control Services. Methods of assessing airport performance. Methods of calculating passenger flow capacity. Aerodrome capacity in air operations. Aerodrome operational readiness. Area control sector capacity. Methods for determining liquidity taking into account so-called beneficial flight plans. Methods for assessing crew status.</p>
<p>Work placement</p>	<p>Not applicable</p>
