| Subject objectives                          | The aim of the course is to prepare the student to planning and designing urban rail transport routes. The means of urban rail transport that will be discussed on the subject are tram, high-speed city rail, metro and other means of transport combining the features of the above. Technical requirements for pavement design and track geometry in Poland and around the world will be presented. Information on the location and design of tram stops, stations and integration nodes will be provided. |   |          |                                     |  |            |     |
| Learning outcomes                           | Course outcome  | Subject outcome   |          |                                     | Method of verification   |            |     |
|   | [K6_U12] able to select tools and methods, carry out assessments and simple tests of transport systems to an extent required of the specialty / learning profile  | Is able to design a fragment of a double-track tram road, a junction and a terminal. Can assess the condition of the track and the condition of its components.<br>Is able to design a cross section of track surface and stops. Knows the rules of tram traffic control and other means of urban rail transport. |          |                                     | [SU1] Assessment of task fulfilment  |            |     |
|   | [K6_W18] has proficiency in transport infrastructure as appropriate for their specialty   | Is able to develop rules for the integration of various transport modes.<br>Knowledge of basic forms of urban rail transport.<br>Understands the need for planning transport systems and can indicate the effects of planning decisions.  |          |                                     | [SW1] Assessment of factual knowledge  |            |     |

|                                 |   |                   |                               |
|---------------------------------|---|-------------------|-------------------------------|
| Subject contents                | <ol style="list-style-type: none"> <li>1. Rail City Transport - admission to lectures,</li> <li>2. Description of vehicles and tram routes and high-speed city rail,</li> <li>3. Description of vehicles and metro routes, two-system tram, pre-metro and fast tram,</li> <li>4. Integration nodes - description of solutions and functional requirements,</li> <li>5. Integration nodes - detailed technical solutions,</li> <li>6. Designing of tram routes - horizontal geometry,</li> <li>7. Tramway design - vertical and cross-sectional geometry,</li> <li>8. Designing tram stops,</li> <li>9. Construction of rail surfaces - ballast,</li> <li>10. Construction of rail surfaces - ballastless,</li> <li>11. Outdoor activities on the tracks,</li> <li>12. Outdoor activities on the tram depot,</li> <li>13. Tram switches - geometry,</li> <li>14. Tram switches - controls,</li> <li>15. Repetition of material.</li> </ol> |                   |                               |
| Prerequisites and co-requisites | Railroads   |                   |                               |
| Assessment methods and criteria | Subject passing criteria  | Passing threshold | Percentage of the final grade |
|                                 | technical desing  | 100.0%            | 45.0%                         |
|                                 | test  | 60.0%             | 55.0%                         |

|                     |                          |  |
