

Subject card

Subject name and code	Biophysics, PG_00054714						
Field of study	Biotechnology						
Date of commencement of studies	October 2021		Academic year of realisation of subject		2023/2024		
Education level	first-cycle studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	3		Language of instruction		Polish		
Semester of study	5		ECTS credits		2.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Department of Pharmaceutical Technology and Biochemistry -> Faculty of Chemistry						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Tomasz Laskowski				
	Teachers		dr hab. inż. Tomasz Laskowski				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	0.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		2.0		18.0	50
Subject objectives	The aim of the course is to present the physical and physicochemical foundations of biological processes and ways of studying living systems.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	K6_W02		The student knows what impact on structure and function of biopolymers have specific properties liquid water and dissolved in salt in it. The student can describe physical and physicochemical basics of determination methods molecular weights biopolymers. Applies classical thermodynamics and non-equilibrium to be described living systems. Describes physical basics advanced techniques microscopic. Explain principles of instrumental operation cell counting techniques and interprets the obtained results.		[SW1] Assessment of factual knowledge		
	K6_U11		Student uses the knowledge on mathematics, chemistry and physics to describe the properties of living systems.		[SU4] Assessment of ability to use methods and tools [SU3] Assessment of ability to use knowledge gained from the subject		
	K6_U01		Student is able to process and inteprete spectral data in order to describe the properties of biomacromolecules and living systems.		[SU2] Assessment of ability to analyse information		

Subject contents	The presented material includes: influence of the properties of liquid water and salts dissolved in it on the structure of biopolymers and the phenomenon on their surface methods of experimental determination of molecular weight of biopolymers application of thermodynamics to the description of animate systems principles of microcalorimetry and the possibility of its application in biophysical research advanced microscopic techniques instrumental techniques for counting cells and analyzing cell suspensions membrane receptors and cell signaling principles of sensory organs at the molecular and cellular level medical techniques for imaging the interior of the body		
Prerequisites and co-requisites	Preceding subjects: physics, cell biology, biochemistry, physical chemistry. Prerequisites: knowledge of the basics of optics, thermodynamics and physicochemistry of solutions; basics of knowledge about cell structure and functioning; knowledge about the structure and role of biopolymers in the cell; basics of enzymology.		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	written exam	60.0%	50.0%
	colloquium during the semester	60.0%	50.0%
