

Subject card

Subject name and code	Mathematics, PG_00046325						
Field of study	Electronics and Telecommunications, Informatics, Automatic Control, Cybernetics and Robotics						
Date of commencement of studies	October 2021	Academic year of realisation of subject				2021/2022	
Education level	second-cycle studies	Subject group				Obligatory subject group in the field of study	
Mode of study	Full-time studies	Mode of delivery				at the university	
Year of study	1	Language of instruction				English	
Semester of study	1	ECTS credits				6.0	
Learning profile	general academic profile	Assessment form				exam	
Conducting unit	Mathematics Center -> Vice-Rector for Education						
Name and surname of lecturer (lecturers)	Subject supervisor		dr Magdalena Musielak				
	Teachers		dr Magdalena Musielak				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	30.0	0.0	0.0	0.0	60
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	60		20.0		70.0	150
Subject objectives	Students obtain competence in using methods of mathematical analysis (calculus) necessary to begin their graduate studies.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	[K7_W01] Knows and understands, to an increased extent, mathematics to the extent necessary to formulate and solve complex issues related to the field of study.	Student defines the basic concepts of differential and integral calculus of one variable and multivariable function. Student applies the basic rules to calculate ordinary and partial derivatives. Student applies basic techniques to evaluate single, double and triple integrals. Student uses definite integral to solve geometrical problems. Student uses the differential calculus to analyze properties of one variable and multivariable functions. Student gives the definitions of basic notions of probability theory, elements of field theory, line and surface integrals, number and function series, and the Fourier series. Student demonstrates different methods of solving ordinary differential equations, also using Laplace transform.			[SW1] Assessment of factual knowledge		
	[K7_U01] can apply mathematical knowledge to formulate and solve complex and non-typical problems related to the field of study by:n-appropriate selection of source information and its critical analysis, synthesis, creative interpretation and presentation,n-application of appropriate methods and toolsn	Student recognizes the importance of skillful use of basic mathematical apparatus in terms of study in the future. Student uses the basic methods of mathematical analysis to formulate and solve engineering problems.			[SU2] Assessment of ability to analyse information [SU4] Assessment of ability to use methods and tools		

Subject contents	<ul style="list-style-type: none"> • Differential and integral calculus of function of one variable. • Ordinary differential equations. • Differential and integral calculus of function of several variable. • Elements of field theor. • Number sequences and series. • Power series. The Fourier series. • Elements of probability theory. 		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Final exam	50.0%	50.0%
	Tests	50.0%	50.0%
