

Subject card

Subject name and code	Cell Biology Laboratory, PG_00054883						
Field of study	Biotechnology						
Date of commencement of studies	October 2021		Academic year of realisation of subject		2021/2022		
Education level	first-cycle studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	2		ECTS credits		3.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Department of Pharmaceutical Technology and Biochemistry -> Faculty of Chemistry						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. Ewa Augustin				
	Teachers		dr hab. Ewa Augustin dr inż. Agnieszka Potęga dr inż. Monika Pawłowska dr hab. Gracjana Klein-Raina mgr Mateusz Olszewski				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	0.0	0.0	45.0	0.0	0.0	45
	E-learning hours included: 0.0						
	Address on the e-learning platform: https://enauczanie.pg.edu.pl/moodle/course/view.php?id=21903#section-0 Adresy na platformie eNauczanie:						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		5.0		25.0	75
Subject objectives	The aim of the course is for students to acquire practical skills related to the structure and function of prokaryotic and eukaryotic cells. The laboratory classes will use the knowledge gained in the previous semester as part of the lectures on the Fundamentals of Biology with Elements of Cell Biology.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	K6_U02		The student is able to explain and investigate the basic biological processes in a prokaryotic and eukaryotic cells based on the properties of the most important cellular biomolecules.		[SU1] Assessment of task fulfilment [SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools [SU5] Assessment of ability to present the results of task		
	K6_W06		The student is able to investigate and explain the functions of the basic cell organelles. Understands the principles of cell signaling, can test the activity and inhibition of the expression of selected genes based on the analysis of the activity of various promoters.		[SW1] Assessment of factual knowledge [SW3] Assessment of knowledge contained in written work and projects		
Subject contents	Examples of laboratory classes: 1. Analysis of the different ways cells move. 2. Determination of bacterial sensitivity to bacteriophagy. 3. Investigation of the activity and inhibition of gene expression - analysis of the activity of various promoters. 4. Determination of the number of chromosomes in eukaryotic cells. 5. Comparison of cell disintegration methods. 6. Morphology of plant and animal cells.						

Prerequisites and co-requisites	Knowledge of the basics of cell biology and biology, the basics of chemistry and physics.		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	laboratory	60.0%	100.0%
Recommended reading	Basic literature	B. Alberts. Fundamentals of cell biology. 2006.	
	Supplementary literature	W. Kilarski. Fundamental structures of cell biology. PWN 2010. W. Sawicki. Histology. PZWL, 2002.	
	eResources addresses		
Example issues/ example questions/ tasks being completed	Compare the known methods of counting cells. What organelles differ an animal cell from a plant cell? What method is used to stain eucariotic chromosomes? What methods of cell disintegration do you know. List the ways in which bacteria move.		
Work placement	Not applicable
