

Subject card

Subject name and code	Mathematics II, PG_00050159						
Field of study	Economics						
Date of commencement of studies	October 2021	Academic year of realisation of subject			2021/2022		
Education level	first-cycle studies	Subject group			Obligatory subject group in the field of study		
Mode of study	Full-time studies	Mode of delivery			blended-learning		
Year of study	1	Language of instruction			Polish		
Semester of study	2	ECTS credits			5.0		
Learning profile	general academic profile	Assessment form			exam		
Conducting unit	Mathematics Center -> Vice-Rector for Education						
Name and surname of lecturer (lecturers)	Subject supervisor		dr Adam Gnatek				
	Teachers		dr Adam Gnatek				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	30.0	0.0	0.0	0.0	60
	E-learning hours included: 30.0						
	Adresy na platformie eNauczanie: WZiE - Ekonomia - Matematyka 2 2021/2022 (A.Gnatek) - Moodle ID: 20106 https://enauczanie.pg.edu.pl/moodle/course/view.php?id=20106						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	60		10.0		55.0	125
Subject objectives	The aim of this subject is to obtain the students competence in the range of using the basic methods of linear algebra and mathematical analysis. Furthermore, the student is able to use this knowledge to solve simple theoretical and practical problems that can be found in the fields of social sciences and engineering.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K6_W01] has a basic knowledge of economic and related sciences and their place in the whole system of social sciences and relations with other sciences	Student knows basic notions of linear algebra and examples. Student uses methods of linear algebra to solve economical tasks. Student analyses a given problem from analytic geometry. Students apply basic concepts and models of mathematical analysis. The student examines the functions and sketches their graphs. Student efficiently calculates integrals. Student uses definite integral to solve geometrical and economical tasks. Student uses mathematical analysis methods to examine the financial processes and solving economic issues. Student can use mathematical tables.	[SW1] Assessment of factual knowledge [SW2] Assessment of knowledge contained in presentation
	[K6_U02] can use theoretical knowledge in practice to solve basic micro and macroeconomic problems	Student uses basic notions and formulas of matrix calculus. Student solves systems of linear equations by various methods. Student effectively operates on complex numbers. Student verifies linear dependence of vectors. Student specifies eigenvalues and eigenvectors of a matrix. Student defines type of a quadratic form. Student applies the basic rules and techniques of integration to calculate indefinite integrals. Student analyses properties of a given function of two or three variables using differential calculus of several variables functions. Student studies convergence of number series. Student solves differential linear equations. Student determines local and global extremes of functions of several variables. The student uses the method of Lagrange multipliers to determine the constrained extrema.	[SU1] Assessment of task fulfilment [SU4] Assessment of ability to use methods and tools
Subject contents	LECTURES and TUTORIALS: Matrix algebra. Linear geometry of n-space, vectors, length and angle. Vector spaces, subspaces and spanning sets. Linear independence, basis and dimension. Eigenvalues and eigenvectors. Quadratic forms. LSM. Integral calculus of one variable functions - antiderivatives. Fundamental rules of integration, substitution method, integration by parts. Integration of rational, trigonometric and irrational functions. Riemann definite integral. Newton-Leibniz theorem. Fundamental methods of definite integration. Geometric and economic examples of applications. Improper integrals. Number and power series. Extrema of functions of two and several variables. Differential linear equations. Constrained extrema.		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Midterm colloquium	50.0%	60.0%
	Written exam	50.0%	20.0%
	Oral exam	50.0%	20.0%
