

## Subject card

Subject name and code	Applied Chemistry and Ecology, PG_00053190						
Field of study	Engineering Management						
Date of commencement of studies	October 2021		Academic year of realisation of subject		2021/2022		
Education level	first-cycle studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		e-learning		
Year of study	1		Language of instruction		Polish		
Semester of study	2		ECTS credits		4.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Faculty of Management and Economics						
Name and surname of lecturer (lecturers)	Subject supervisor		prof. dr hab. inż. Maria Szpakowska				
	Teachers		dr inż. Ewa Marjańska				
			mgr Anna Wendt				
			prof. dr hab. inż. Maria Szpakowska				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	30.0	0.0	0.0	0.0	60
	E-learning hours included: 60.0						
	Address on the e-learning platform: <a href="https://enauczanie.pg.edu.pl/moodle/enrol/index.php?id=18109">https://enauczanie.pg.edu.pl/moodle/enrol/index.php?id=18109</a> Adresy na platformie eNauczanie:						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	60		8.0		32.0	100
Subject objectives	To familiarize students with basic chemical compounds and their application and the acquisition of chemical calculation skills. Application of basic chemical calculations to solve ecological problems.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K6_K02] identifies problems related to undertaking various tasks, including engineering in the changing conditions of the organisation's functioning; takes into account the ethical aspect related to the implementation of the organisation's tasks	Understands the concept of sustainable development.	[SK1] Assessment of group work skills
	[K6_W08] has a basic knowledge of the changes taking place in the organisation and its environment, taking into account environmental problems	Understands the basic processes occurring in the environment.	[SW3] Assessment of knowledge contained in written work and projects
	[K6_K04] is aware of the importance of the non-technical impacts of engineering activities, including environmental impacts	Knows the basics of environmental management according to ISO 14000.	[SK5] Assessment of ability to solve problems that arise in practice [SK1] Assessment of group work skills
	[K6_W11] has the basic knowledge of mathematics, physics and chemistry necessary to solve technical problems	Defines basic chemical compounds and their application in the environment.	[SW1] Assessment of factual knowledge
	[K6_U01] interprets and analyses the phenomena and processes taking place in the economy and organisation using basic theoretical knowledge of economics, management and science	Solves simple chemical tasks related to structure of matter and the existence of chemical compounds in nature.	[SU1] Assessment of task fulfilment [SU2] Assessment of ability to analyse information [SU4] Assessment of ability to use methods and tools

Subject contents	LECTURE  General concepts and model of environmental contamination as well as chemical laws and structure of matter Periodic table and the structure of elements Molecule structure, ionization energy, electronic affinity, electronegativity Atomic, ionic, hydrogen and coordination bonds The state of gas, excellent gases, technical, fuel, gases in the air Sources of air pollution, smog, greenhouse effect, ozone hole, radioactive contamination Liquid state, physical and chemical properties of water, water hardness, natural water and sewage, wastewater treatment, solutions, concentration and solubility Glassy state, glass Solid state, crystals and their types, Types of chemical compounds, oxides, bases, acids, salts Chemical reactions, water dissociation, neutralization reactions, redox reactions Chemical kinetics Electrochemistry, electrolysis, voltage series, galvanic cells Metals, classification, minerals, precious stones, metal alloys, corrosion Silicon and silica applications Chemistry of coal, hydrocarbons, alcohols and phenols, ethers, aldehydes and ketones, organic acids, esters, soaps and detergents Chemical compounds and waste, waste classification, recycling, composting, biogas, incineration, storage Organic, municipal, industrial, energy, hazardous waste Soil contamination  Exercises Introduction. Rules for passing the subject Construction of the periodic table of elements. Total patterns. Periodicity law. Valence. Constitution law. Chemical equations. Patterns of two-component elements of main groups (oxides, hydrides). Atomic number and mass number. Isotopes. Basics of chemical calculations Molar mass. Molecular weight. Molecular interpretation of chemical transformations. Stoichiometric ratios in chemical transformations. Avogadro's law. Examples and techniques of chemical calculations. Rapid reaction and chemical equilibrium The concept of the speed of a chemical reaction. Factors influencing the speed of chemical reactions. Constant chemical equilibrium. The law of the masses. The rule of outrage. The influence of pressure, temperature on the equilibrium constant. Examples of calculations. Saturated, unsaturated and supersaturated solutions. Energy effects accompanying dissolution processes. Methods for expressing concentration of solutions. Dilutions and conversion of concentrations. Reactions in aqueous solutions Water dissociation. PH scale. Determination of pH of solutions. Dissociation. Properties of inorganic compounds Division of inorganic compounds. Construction and nomenclature. Basic reactions. Galvanic cells Half-cells and their types. Half-cell potential. Electromotive force. A series of voltage. Galvanic cells as a power source. Calculations. Electrolysis Electrolyser construction. Faraday's Law. Faraday's standing. Practical applications of electrolysis - tasks. Redox reactions. Corrosion of metals and methods of its eradication. Works. Written test from part 1 - 5 tasks. Holdgate Model - tasks Waste classification in the light of the Waste Act 2001, including novellas Analysis of the waste catalog Environmental management in the light of ISO 14000		
Prerequisites and co-requisites	Fundamentals of mathematics and physics		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Reports in exercises	60.0%	25.0%
	Test In lectures	60.0%	40.0%
	Test In exercises	60.0%	35.0%
