

## Subject card

Subject name and code	Mathematics I, PG_00040551						
Field of study	Engineering Management						
Date of commencement of studies	October 2021	Academic year of realisation of subject			2021/2022		
Education level	first-cycle studies	Subject group			Obligatory subject group in the field of study		
Mode of study	Full-time studies	Mode of delivery			blended-learning		
Year of study	1	Language of instruction			Polish		
Semester of study	1	ECTS credits			5.0		
Learning profile	general academic profile	Assessment form			exam		
Conducting unit	Mathematics Center -> Vice-Rector for Education						
Name and surname of lecturer (lecturers)	Subject supervisor	dr Anita Dąbrowicz-Tlałka					
	Teachers	mgr inż. Krystyna Dąbrowska dr Anita Dąbrowicz-Tlałka					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	30.0	0.0	0.0	0.0	60
	E-learning hours included: 30.0						
	Address on the e-learning platform: <a href="https://enauczanie.pg.edu.pl/moodle/course/view.php?id=16460">https://enauczanie.pg.edu.pl/moodle/course/view.php?id=16460</a> Adresy na platformie eNauczanie:						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study		SUM
	Number of study hours	60	6.0		59.0		125
Subject objectives	The aim of the course is to give students a thorough understanding of basic concepts of calculus and algebra so that they are able to use them at different areas of economics.  After completing the course the student: 1. will be provided with the ability of understanding the concepts of mathematical notions introduced during the lectures; 2. will have developed competent skills and will be able to demonstrate problem solving skills at the areas of economics involving mathematical tools						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K6_U01] interprets and analyses the phenomena and processes taking place in the economy and organisation using basic theoretical knowledge of economics, management and science	Student combines knowledge of mathematics with knowledge from other fields. Student is able to process the acquired information, analyze and interpret it, draw conclusions and reason opinions.	[SU2] Assessment of ability to analyse information [SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools
	[K6_W11] has the basic knowledge of mathematics, physics and chemistry necessary to solve technical problems	Student mentions basic properties of elementary functions. Student solves equations and inequalities with elementary functions. Student defines the basic concepts of differential calculus of one variable. Student determines intervals of monotonicity of a given functions and its extrema. Student analyses the properties of functions on the basis of an examination of its first and second derivatives. Student geometrically interprets the results of an examination of a graph of a function using the concept of limit, continuity and derivatives of functions. The student knows the basic concepts of matrix and vector calculus and rules related to the calculation of determinants. Student uses methods of mathematical description of phenomena in the economical processes.	[SW1] Assessment of factual knowledge [SW2] Assessment of knowledge contained in presentation
Subject contents	<p>Functions of one variable and their properties. Elementary functions: absolute value, polynomials, rational functions, power functions, exponential and logarithmic functions, trigonometric and inverse trigonometric functions - properties, graphs, solving equations and inequalities.</p> <p>Infinite sequences - properties, limits. The limit and continuity of a function. Derivatives and differentials of first and higher orders. Rolle, Lagrange, de l'Hospital, Taylor-Maclaurin theorems. Monotonicity and local extrema. Convexity, concavity and inflexion points of a function. Asymptotes.</p> <p>Matrices, their properties and operations on matrices. Determinants. Systems of linear equations and inequalities. Basic definitions and properties of vectors. Eigenvectors and eigenvalues.</p>		
Prerequisites and co-requisites	There is no requirement.		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Class activity	0.0%	8.0%
	Tests (lecture)	0.0%	6.0%
	Midterm colloquium	0.0%	36.0%
	Exam	50.0%	50.0%
