

Subject card

Subject name and code	FORECASTING AND OPTIMIZATION IN LOGISTICS, PG_00037869						
Field of study	Management						
Date of commencement of studies	October 2021	Academic year of realisation of subject			2022/2023		
Education level	second-cycle studies	Subject group			Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	2	Language of instruction			English		
Semester of study	3	ECTS credits			2.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Faculty of Management and Economics						
Name and surname of lecturer (lecturers)	Subject supervisor	dr Mateusz Muchlado					
	Teachers	dr Mateusz Muchlado mgr Anna Wendt					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	0.0	0.0	30.0	0.0	0.0	30
	E-learning hours included: 0.0						
	Forecasting and optimalization in logistics (Winter 22/23) - Moodle ID: 25295 https://enauczanie.pg.edu.pl/moodle/course/view.php?id=25295						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study	SUM	
	Number of study hours	30	2.0		18.0	50	
Subject objectives	The aim of the course is to develop and implement solutions that increase the effectiveness and efficiency of individual processes or the overall Logistics system of the company, including - optimization of logistics costs - warehouse and production optimization - optimization of transport, transport costs						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K7_U02] analyses complex economic processes and phenomena using selected methods and techniques for analysing socio-economic data, and formulates their own opinions and conclusions concerning these processes and phenomena	The student applies the methods of forecasting and optimization in logistics for organizations, makes a project for the organization in the area of logistics with the use of methods of forecasting and optimization.	[SU1] Assessment of task fulfilment [SU4] Assessment of ability to use methods and tools [SU5] Assessment of ability to present the results of task
	[K7_K04] acts in accordance with the principles of building relations and managing processes and projects, organizing them for the benefit of the company and anticipating the consequences of decisions made	The student develops the social competence of individual and team work, acting for the prosperity of the organization.	[SK5] Assessment of ability to solve problems that arise in practice [SK2] Assessment of progress of work
	[K7_W11] has an in-depth knowledge of the creation, operation and design of management structures and systems and their improvement in the process of achieving objectives	The student knows the idea of the logistic processes and logistic systems in organizations.	[SW1] Assessment of factual knowledge
	[K7_W07] knows in depth selected methods and techniques of data acquisition, enabling analysis and modelling of structures and socio-economic relations, processes taking place and their impact on the implementation of objectives of the organization, including government administration, local government and non-profit organizations	The student knows methods of forecasting and optimization and understands the importance of forecasting and optimization in rationalization of the logistics support for an organization.	[SW1] Assessment of factual knowledge
Subject contents	<p>Logistics forecasting and optimization includes projects aimed at increasing the efficiency and effectiveness of the entire company's logistics processes, including procurement, production, storage and distribution. It can also refer to certain aspects of logistics, for example logistics costs or transport costs.</p> <ol style="list-style-type: none"> 1. Logistics management process maps: (supply, production, distribution, waste logistics) 2. Technological card 3. The effective working time for logistics operator 4. The effective working time for production industrial robot 5. Failure mode and effects analysis (FMEA) 6. Transport logistics symulations 7. ABC method of management of raw materials 8. Total Productive Maintenance 9. Card risks in the workplace 		
Prerequisites and co-requisites	Basic knowledge of economics and management, English language usage		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Project	55.0%	80.0%
	Activity at classes	50.0%	10.0%
	Attendance at classes	80.0%	10.0%
