

## 。 GDAŃSK UNIVERSITY OF TECHNOLOGY

## Subject card

Subject name and code	Water supply and sewage systems, PG_00043512								
Field of study	Environmental Engineering								
Date of commencement of studies	October 2021		Academic year of realisation of subject		2024/2025				
Education level	first-cycle studies		Subject group		Optional subject group Subject group related to scientific research in the field of study				
Mode of study	Full-time studies		Mode of delivery			at the university			
Year of study	4		Language of instruction		Polish				
Semester of study	7		ECTS credits			5.0			
Learning profile	general academic profile		Assessment form		assessment				
Conducting unit	Department of Sanitary Engineering -> Faculty of Civil and Environmental Engineering								
Name and surname	Subject supervisor		dr inż. Karolina Matej-Łukowicz						
of lecturer (lecturers)	Teachers		dr inż. Karolina Matej-Łukowicz						
			mgr inż. Natalia Dąbrowska						
			dr inż. Nicole Nawrot						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Projec	t	Seminar	SUM	
	Number of study hours	15.0	30.0	0.0	15.0		0.0	60	
	E-learning hours included: 0.0								
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study		SUM	
	Number of study hours	60		8.0		60.0		128	
Subject objectives	The aim of the course is to supplement knowledge in the design and operation of water supply and sewage networks. The lectures include: odors in sewage systems, operation of water and sewage systems, and principles of operation and design of sewage pumping stations. During the exercises, students will work with design-supporting software and learn the principles of designing and implementing water supply nodes. During design classes, students learn about the process of preparing and coordinating design documentation.								

Learning outcomes	arning outcomes Course outcome		Method of verification	
	[K6_U16] can, when formulating and solving engineering tasks in environmental engineering, evaluate, select and apply appropriate methods and tools, recognize their non-technical aspects, including environmental, economic and legal aspects	The student is able to assess the usefulness of methods and tools used to solve typical sewage engineering tasks.	[SU4] Assessment of ability to use methods and tools	
	[K6_W09] has ordered, theoretically founded knowledge in the field of water supply, sewage, heating, ventilation and air conditioning, and the principles of shaping the microclimate of rooms; knows legal regulations, standardization issues and recommendations for the design of water supply, sewage, heating and gas networks and installations	The student has theoretically based knowledge of the types and functions of individual elements of sewage networks and methods of wastewater disposal.	[SW3] Assessment of knowledge contained in written work and projects	
	[K6_U08] can use properly selected methods and devices of hydraulics and hydrology, enabling determination of basic quantities characterizing the flow of water in open channels and rivers, pipelines and flow objects of environmental engineering	The student is understanding the fundamentals of hydraulic design for storm sewer and gravity-based sewage networks.	[SU4] Assessment of ability to use methods and tools [SU3] Assessment of ability to use knowledge gained from the subject	
	[K6_U03] can prepare documentation regarding the implementation of an engineering task/project and prepare a text or presentation including a discussion of the results of the implementation	The student can present the finished project, prepare all the required paperwork, and is understands the office where it will be submitted for acceptance.	[SU1] Assessment of task fulfilment	
Subject contents	1. Odor neutralization in sewage net stations4. Programs supporting the odocumentation	works2. Water and sewage network design of water and sewage network	failures3. Sewage pumping s5. Procedures for preparing design	
Prerequisites				
		_		
Assessment methods	Subject passing criteria	Passing threshold	Percentage of the final grade	
		60.0%	20.0%	
	Test	60.0%	40.0%
